Foreword

Congratulations on your purchase of MIMAKI color ink jet printer “CJV150 series”.
“CJV150 series” (called as this machine hereafter) is a color inkjet printer that can print on 1.3m or 1.6m-width media with solvent ink (4-color, 6-color and 8-color) and sublimation dye ink (4-color and 6-color) realizing high image quality.

CAUTION

THIS LIMITED WARRANTY OF MIMAKI SHALL BE THE SOLE AND EXCLUSIVE WARRANTY AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS, AND MIMAKI NEITHER ASSUMES NOR AUTHORIZES DEALER TO ASSUME FOR IT ANY OTHER OBLIGATION OR LIABILITY OR MAKE ANY OTHER WARRANTY OR MAKE ANY OTHER WARRANTY IN CONNECTION WITH ANY PRODUCT WITHOUT MIMAKI’S PRIOR WRITTEN CONSENT.

IN NO EVENT SHALL MIMAKI BE LIABLE FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES OR FOR LOSS OF PROFITS OF DEALER OR CUSTOMERS OF ANY PRODUCT.

Requests

• This manual is describing the operations and maintenance of this machine.
• The illustrations used in this manual may vary depending on the machine.
• This manual has been carefully prepared for your easy understanding, however, please do not hesitate to contact a distributor in your district or our office if you have any inquiry.
• The contents of this Operation Manual are subject to change for improvement without notice.
• You can also download the latest manual from our website.

FCC Statement (USA)

This machine has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the printer is operated in a commercial environment. This machine generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the operation manual, may cause harmful interference to radio communications.

Operation of this machine in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense.

The limits stipulated by FCC rules might be exceeded if Mimaki-recommended cable is not used for connections of this machine. To prevent this, use of Mimaki-recommended cable is essential for connecting this machine.

Reproduction of this manual is strictly prohibited. All Rights Reserved. Copyright © 2016 MIMAKI ENGINEERING Co., Ltd.
Safety Precautions

Symbols

Symbols are used in this manual for safe operation and for prevention of damage to the machine. The indicated sign is different depending on the content of caution. Symbols and their meanings are given below. Please follow these instructions as you read this manual.

Examples of symbols

<table>
<thead>
<tr>
<th>Meaning</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="Image" alt="Warning" /></td>
<td>Failure to observe the instructions given with this symbol can result in death or serious injuries to personnel. Be sure to read it carefully and use it properly.</td>
</tr>
<tr>
<td><img src="Image" alt="Caution" /></td>
<td>Failure to observe the instructions given with this symbol can result in injuries to personnel or damage to property.</td>
</tr>
<tr>
<td><img src="Image" alt="Important" /></td>
<td>Important notes in use of this machine are given with this symbol. Understand the notes thoroughly to operate the machine properly.</td>
</tr>
<tr>
<td><img src="Image" alt="Useful" /></td>
<td>Useful information is given with this symbol. Refer to the information to operate the machine properly.</td>
</tr>
<tr>
<td><img src="Image" alt="Reference" /></td>
<td>Indicates the reference page for related contents.</td>
</tr>
</tbody>
</table>

The symbol "⚠️" indicates that the instructions must be observed as strictly as the CAUTION instructions (including DANGER and WARNING instructions). A sign representing a precaution (the sign shown at left warns of hazardous voltage) is shown in the triangle.

The symbol "🚫" indicates that the action shown is prohibited. A sign representing a prohibited action (the sign shown at left prohibits disassembly) is shown in or around the circle.

The symbol "✅" indicates that the action shown must be taken without fail or the instructions must be observed without fail. A sign representing a particular instruction (the sign shown at left instructs to unplug the cable from the wall outlet) is shown in the circle.

Warning for Use

- The set of power cables provided with this machine is for use with this machine only. It cannot be used with other electrical devices. Do not use any power cables other than the ones provided with the machine. It may cause a fire or electric shock.
- Do not damage, break or work upon the power cable. If a heavy material is placed on the power cable, or if it is heated or pulled, the power cable may be damaged, resulting in fire or electric shocks.
- Avoid use in humid places. Also, do not pour water on the unit. It may cause a fire, electric shock, or malfunction.
- Use of the machine under an abnormal condition where it produces smoke or strange smell can result in fire or electric shocks. Be sure to turn off the power switch immediately and unplug the cable from the power outlet. Check first that the machine no longer produces smoke, and then contact your distributor or our sales office for repair.
- Never disassemble or modify your machine or ink cartridge by yourself. It may cause an electric shock or malfunction.
- Do not use extension cables. It may cause a fire or electric shock.
- Keep the power plug prong clear of any foreign object such as a piece of metal. It may cause a fire or electric shock.
- Do not use multi-outlet extension. It may cause a fire or electric shock.
- If the power cable is damaged or the core wire is exposed or broken, ask your service representative to replace it. Using it as it is may cause a fire or electric shock.
- Do not handle the power plug with wet hands. It may cause an electric shock.
- Grasp by holding the plug itself when removing the power plug from power outlet. Do not pull the power cable. The cable may be damaged, resulting in a fire or electric shock.
- Do not use a voltage other than the displayed. It may cause a fire or electric shock.
- Do not use a power frequency other than the indicated. It may cause a fire or electric shock.
- If a foreign object such as metal, water, or liquid enters this machine, turn it off immediately. After that, be sure to remove the power plug from the outlet and contact your service representative. Using it as it is may cause a fire or electric shock.
- If ink leaks, turn off the main power switch, disconnect the power plug, and contact your local distributor, our sales office, or call center.
- Make sure that dust and dirt do not adhere to the heater on the media transport surface. It may cause a fire or electric shock.
- Keep children away from this machine.
- Since solvent ink may ignite, do not use fire in the place where the machine is used.
**Safety Precautions**

### Precautions in Use

#### Handling of the power cable
- **WARNING**
- Do not use a flammable spray or solvent inside or around the machine. It may cause a fire or electric shock due to ignition.
- Do not place containers or small metal objects containing vases, flower pots, cups, cosmetics, medicines, water, etc. on or near the machine. If it spills or gets inside, it may cause a fire or electric shock.

#### Power supply
- **CAUTION**
- Leave the breaker turned ON at all times.
- Do not turn off the main power switch on the right side.

#### Note on maintenance
- **CAUTION**
- Pay close attention to ventilation and be sure to wear the included safety glasses and gloves provided, and the filtering face mask, when handling ink, maintenance cleaning solution, waste ink, or other solutions used in this machine. Failure to do so may result in ink or other liquids splashing and coming into contact with the skin, eyes, or mouth.
  - Gloves are consumables. Use a commercial product when the attached gloves are used up.

#### Be careful with the movable parts
- **WARNING**
- Do not touch the rolling grit roller; otherwise, you may hurt your fingers or tear off your finger nails.
  - Keep your head and hands away from any moving parts during cutting operation; otherwise, you may get your hair caught in the machine or get injuries.
  - Wear proper clothes. (Do not wear loose-fit clothes or accessories). Bind a long hair.

#### Caution with heater
- **WARNING**
- Do not spill liquid on the Media Transfer Surface as this may cause failure of the heater or firing.
  - Do not touch Media Transfer Surface heaters with a bare hand while the heater is hot; otherwise, you can get burned.

### Handling of ink

- **WARNING**
- There are precautionary notes on ink on the ink cartridge. Read it carefully and fully understand it before using it.
- Before using ink and cleaning solution, be sure to read the Safety Data Sheet (SDS).
- Keep ink away from fire. Also, be sure that the room is well ventilated when using or handling ink.
  - Immediately wipe off any ink, maintenance washing liquid, waste ink, or other liquid used with the product that contacts your skin. Wash using soap and rinse with plenty of water. Failure to wash off liquid may result in skin inflammation. If your skin becomes irritated or painful, seek medical attention immediately.
  - If ink, maintenance washing liquid, waste ink, or any other liquid used in the product comes into contact with your eyes, rinse immediately with plenty of clean water. Rinse for at least 15 minutes. If you wear contact lenses and they can be easily removed, remove after rinsing for at least 15 minutes with clean water. Be sure to rinse the undersides of your eyelids. Failure to rinse off liquid may result in blindness or impaired vision. If your eyes become irritated or painful, seek medical attention immediately.
- If ink, maintenance washing liquid, waste ink, or any other liquid used in the product enters your mouth or is swallowed, gargle with water immediately. Do not induce vomiting. Seek medical attention promptly. Inducing vomiting may cause liquid to enter the airway.
  - If a large amount of vapor is inhaled, move to a well-ventilated area, keep warm, and rest in a posture that allows easy breathing. If the condition does not improve, seek medical attention promptly.

#### Notes on handling media
- **WARNING**
- When setting the roll media, set it by two or more people. The weight of the roll media may hurt your back.
- When changing media, be careful not to get your fingers caught or injured.
- There is a media cutter inside the machine. When replacing or replenishing media or removing a media jam, do not touch anything other than the locations specified in this manual. It may cause injury.

#### Caution with cutters
- **WARNING**
- Do not touch the cutter blade, which is very sharp.
  - Store the cutter blade in a place that is out of the reach of children. In addition, dispose of used cutter blades according to regional laws and regulations.
  - Do not shake the tool after having set the cutter. Otherwise, the blade edge may pop out, causing you to get injured.

#### Notes When Handling the Main Unit
- **WARNING**
- Do not use in poorly ventilated or sealed rooms.
- Provide sufficient ventilation when using.
- Contact your service representative for cleaning inside the unit. If dust is accumulated inside the projector and it is not cleaned for a long time, it may cause a fire or malfunction.
## CAUTIONS and NOTES

### Clump lever
- **WARNING**

  • Do not raise the clamp lever during printing. Printing will end.

### Periodic replacement parts
- Some parts of this machine must be replaced with a new one regularly. In order to use the machine for a long time, be sure to subscribe to an annual maintenance contract.

### Notes on maintenance
- Use in a room with as little dust as possible.
- Dust can also cause ink drops to fall from the head to the media during printing. In this case, clean around the head.
- Clean the capping station and wiper frequently (removal of dust and paper powder).
- Keep the front cover closed even when not printing. Dust may accumulate on the head nozzles.

### Handling of ink cartridges
- Safety is evaluated by our recommended ink. Please use our recommended ink for safe use.
- If the ink cartridge is moved from a cold place to a warm place, leave it in the room temperature for three hours or more before using it.
- Open the ink cartridge just before installation. If the ink is left open for a long time, normal printing performance may not be ensured.
- Make sure to store ink cartridges in a cool and dark place.
- Keep ink cartridges and waste ink tank out of reach of children.
- Be sure to thoroughly consume the ink cartridge within 3 months after opening it. If it has passed for a long time after opening, the print quality would be poor.
- When you no longer need ink cartridges, ink packs, and waste ink, please hand them over to your distributor or service representative. If you dispose them by yourself, please follow the regulations stipulated by the industrial waste disposer or the local regulations of each country.
- Do not hit the ink cartridge strongly or shake it violently. Ink may leak from the cartridge.
- Do not refill ink in the ink pack or ink cartridge. We are not responsible for any problems caused by using refilled ink.
- Do not touch or stain the contact area of the ink cartridge PCB. It may cause a PCB failure.
- Make sure that you shake the white and silver ink cartridges several times before printing.

### Protection of media from dust
- Store media in a bag. Wiping off dust accumulated on media will adversely affect the media due to static electricity.
- When leaving the workshop after the working hours, do not leave any media on the roll hanger. Dust will adhere on the media.

### Disposition of this machine
- Consult your sales or service representative for proper disposal of this machine. Otherwise, commission an industrial waste disposal company.

### Handling of media
- Use recommended media.
  - Use our recommended media to print with stable and high image quality.
  - Pay attention to the expansion and contraction of the media. Do not use media that has just been opened. The media may expand and contract depending on the room temperature and humidity. Open the package and expose it to the place of use for at least 30 minutes before attaching it to the unit.
  - Do not use curled media. In addition to causing media jams, it also affects the image quality.
  - Also, use media with tight curls after removing the curls. If a regular-sized coated sheet of media is rolled and stored, the coated side has to face outside.
  - Be careful to dusts on the edge face of the media. Some rolls have dusts contained in the package gathered on the edge surface of the roll. If you use as it is, the drawing quality may be degraded due to nozzle missing or ink drops.
  - Be sure to set the roll after removing dusts adhering on the edge face of the roll.
  - Set the heater temperature according to the characteristics of the media. (Heater-equipped machine)
  - Set the temperature of the Pre-heater, Print heater and Post-heater according to the media type and characteristics. In addition, there is a method to specify the automatic temperature setting from the operation panel by specifying the profile from the dedicated RIP. Refer to the instruction manual of your RIP for the specification method. (Heater-equipped machine)
  - Do not leave the media on for a long time with the heater ON. (Heater-equipped machine)
### Cautions on Installation

<table>
<thead>
<tr>
<th>CAUTION</th>
<th>On an inclined surface</th>
</tr>
</thead>
<tbody>
<tr>
<td>A place exposed to direct sunlight</td>
<td>A place exposed to direct airflow from an air conditioner or the like.</td>
</tr>

<td>A place that vibrates</td>
<td>A place where temperature or humidity varies significantly</td>
</tr>
<tr>
<td>A place where temperature or humidity varies significantly</td>
<td>Around a place where fire is used</td>
</tr>
</tbody>
</table>

• Use the machine under the following environmental conditions:
• Operating environment:
  - 20 to 30 °C
  - (68 to 86 °F)
  - 35 to 65 % (Rh)

### Safety interlock

This machine is equipped with interlocks to terminate the operation for your safety when the cover opens during printing etc. (red circle parts in the figure below).
Warning labels

Warning labels are stuck on the machine. Be sure to fully understand the warning given on the labels. If a warning label is illegible due to stains or has come off, purchase a new one from a distributor or our sales office.

Moving This Machine

Where to Install This Machine

Secure a suitable installation space before assembling this machine.

The place of installation must have enough space for not only this machine itself, but also for the printing operation.

Moving This Machine

Move this machine according to the following steps when this machine needs to be moved on the same step-free floor.

- When the machine is moved to any place other than on the same step-free floor, contact your distributor or our service office.
  If you move it by yourself, failure or damage may occur. Be sure to request your distributor or our service office to move this machine.

- When moving this machine, take care that it does not receive a significant impact.
- Be sure to lock the casters after moving of this machine.

1. Remove the caster blocks.

2. Move this machine as shown in the figure.
   - For safety, be sure to operate it with 4 people or more.
   - Do not push the cover to move this machine since the cover may be broken.

3. Reinstall the caster blocks.

Working Environmental Temperature

Use this machine in an environment of 20 to 30°C to ensure reliable printing.
Names of Parts and Functions

Front Side of the Machine

**Ink cartridges**
Each cartridge contains an ink of a particular color.

**Cartridge protection cover**
This prevents an injury or breakage of the machine due to a protrusion of the ink cartridge. (It is located under the ink cartridge.)

**Operation panel**
This panel has the operation keys required for operating the machine and the LCDs for displaying setting items, etc.

**CleaningSolutionCartridge slot**
Insert the cleaning solution cartridge.

**Waste ink tank**
Waste ink gathers in this tank.

**Carriage**
Move the print head unit from side to side.

**Post-heater**
Dries ink after printing.

**Platen**
Print area.

**Maintenance cover**
Open the cover in maintenance. Even when the power switch is off, keep all covers closed.

**Stand**
Supports the main body of the machine. It is provided with casters that are used to move this machine.

**Clamp lever (front)**
Moves the pinch rollers up and down to hold or release the media.

**Take-up device**
Automatically winds up the roll media printed.
Chapter 1 Before Use

Rear Side and Right Side of the Machine

Clamp lever (rear)
Interlocks with the clamp lever in the font of this machine.

USB 2.0 connector
This is USB2.0 interface connector.

LAN connector
Please use this connector when you use network function.

Main power switch
Turns on/off the main power for this machine. Leave the main power turned on to prevent ink clogging.

AC inlet
Connect the power cable to the AC inlet.

Media adsorption fan exhaust port
An exhaust port for the fan to adsorb media.

Roll holders
Putting this into the paper core (right and left) of a roll media, hold the media. It supports the paper core of 2 inch and 3 inch.
**Operation Panel**

Use the operation panel to make settings for printing or operate this machine.

**Display**

Displays the following items:
- Printer status
- Set media width
- Heater temperature (current temperature/set temperature)
- Ink status *1
- Functions assigned to [FUNC1] to [FUNC3] *2

**Status indicator lamp**

Indicates the machine’s status (printing, error occurred, etc).

<table>
<thead>
<tr>
<th>Condition of Lamp</th>
<th>Condition of machine</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>Machine is in LOCAL mode, no print data has been received, and no errors have occurred.</td>
</tr>
<tr>

</tr>
<tr>
<td>Flashing red</td>
<td>Error has occurred.</td>
</tr>
<tr>
<td>Lit steady red</td>
<td>Error (SYSTEM HALT) has occurred.</td>
</tr>
</tbody>
</table>

**JOG key**

Use these keys to shift the carriage or the media in [LOCAL]. Also use them to select an item of printing conditions.

**END/POWER key**

Cancels the last input value or returns the setting menu to the immediate higher level of the hierarchy. Also, press this to turn the power on or off. (Give it a long press to turn the power off.)

**ENTER key**

Registers the last input value as the setting value or goes to the immediate lower level of the hierarchy.

*1 : Ink Status

Ink status (e.g., remaining ink levels) and ink errors are indicated by icons.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="M" /></td>
<td>The ink remaining levels will be indicated with the nine types of the following icons.</td>
</tr>
<tr>
<td><img src="image" alt="M" /></td>
<td>Ink full</td>
</tr>
<tr>
<td><img src="image" alt="M" /></td>

<td>Approx. 7/8 used</td>
</tr>
<tr>
<td><img src="image" alt="M" /></td>
<td>Near end</td>
</tr>
</tbody>
</table>

Displayed when ink near end. The remaining ink is little, so provide new ink.

Displayed when ink end or ink error occurs. The printing cannot be performed.

Displayed when the ink expiration date expires. Replace with new ink or use it up as soon as possible. It is possible to print.

* The power switch under the operation panel lights in blue when the power is turned on, and off when the power switch is turned off. The ink clogging prevention function is periodically operated even when the power switch is OFF if the main power switch keeps being ON. (Auto maintenance function) P.1-4
### *2 : Functions assigned to [FUNC1] to [FUNC3]

Contents of functions assigned to [FUNC1] to [FUNC3] are described below.

<table>
<thead>
<tr>
<th>Icon</th>

</tr>
</tbody>
</table>

• The color of icons changes according to the state of the printer.
  - When the icon is green : The printer is in REMOTE mode.
  - When the icon is dark blue : The printer is in LOCAL mode.
  - When the icon is yellow : A warning has been issued.
  - When the icon is red : An error has been issued.
Media sensor
The media sensor detects the presence of the media and the media length. This machine has one media sensor on the platen (in the rear).

- When setting a media, be sure to cover the media sensors located on the rear of the platen. The media cannot be detected unless it is placed over the sensor.

Carriage
The carriage consists of the printer unit and the cutter unit.

Printer Unit

Cutter Unit

Cutter blade and slot for cutting
The carriage is provided with a cutter unit for cutting off the media that has been printed on. The cutter cuts off the sheet of media along the slot for cutting on the platen.

Capping station
The capping station consists of the ink caps, the wiper for cleaning the heads, etc. The ink caps prevent the nozzles in the ink heads from drying up. The wiper cleans the nozzles in the heads. The wiper is consumable. If the wiper is deformed or the media is stained, replace the wiper with a new one.

- Be sure to wear the attached safety glasses in cleaning within the capping station to protect your eyes against ink. Otherwise, you may get ink in your eyes.

Pinch Rollers and Grit Rollers
This machine retains the media with the pinch rollers and the grit rollers.

- Keep the pinch rollers lifted up when this machine is not in use. If the pinch rollers are left lowered for an extended period of time, they can be deformed and fail to securely retain the media.
Chapter 1 Before Use

Connecting Cables

Connecting USB2.0 Interface Cable

Connect the PC and this machine with the USB2.0 interface cable.

- Your RIP must be compatible with USB 2.0.
- Contact a RIP maker near your location or our office when the USB2.0 interface is not attached to the PC.

Notes on USB 2.0 Interface

- Your RIP must be compatible with USB 2.0.

- When two or more CJV150 machines are connected to one personal computer
  When two or more CJV150 machines are connected to one personal computer, the personal computer may not recognize all the CJV150 machines normally. Reconnect the unrecognized CJV150 machine to another USB port, if available, and check to see if it is recognized. If the CJV150 machine is not recognized by the newly connected USB port, use USB 2.0 repeater cables available on the market.

- Notes on peripheral devices in USB high speed mode
  When a peripheral device (USB memory or USB HDD) to be operated in USB high speed mode is connected to the same personal computer that a CJV150 machine is connected to, the USB device may not be recognized. When CJV150 is connected to the personal computer to which an external HDD is connected via USB, the speed of data output to CJV150 may drop. That can cause the head unit to stop temporarily at the right or left end during printing.

Removing USB memory

If a USB memory module is inserted in the personal computer to which a CJV150 machine is connected, click “Stop” in the “Safely Remove Hardware” window by following the instructions given there first and remove the module.

Leaving a USB memory module inserted can cause [ERROR 10 COMMAND ERROR]. Copy the data onto the hard disk before outputting it for printing.

Connecting the power cable

1. Insert the power cable into an inlet of the machine.
2. Secure a cable band.
   - Secure the cable with the cable band attached to this machine.
3. Insert the power plug into a plug socket.
   - Do not use any power cables other than the attached power cable.
   - Be sure to connect the power cable to the outlet near this machine, and make sure that the power cable can be easily removed.
   - Connect the power cable to the grounded outlet. Otherwise, it may result in fire or an electric shock.

- Your RIP must be compatible with USB 2.0.
- Contact a RIP maker near your location or our office when the USB2.0 interface is not attached to the PC.
Inserting ink cartridges

Caution in handling of ink cartridges

- There are precautionary notes on ink on the ink cartridge. Read it carefully and fully understand it before using it.
- Before using ink and cleaning solution, be sure to read the Safety Data Sheet (SDS).
- Keep ink away from fire. Also, be sure that the room is well ventilated when using or handling ink.
- Immediately wipe off any ink, maintenance washing liquid, waste ink, or other liquid used with the product that contacts your skin. Wash using soap and rinse with plenty of water. Failure to wash off liquid may result in skin inflammation. If your skin becomes irritated or painful, seek medical attention immediately.
- If ink, maintenance washing liquid, waste ink, or any other liquid used in the product enters into contact with your eyes, rinse immediately with plenty of clean water. Rinse for at least 15 minutes. If you wear contact lenses and they can be easily removed, remove after rinsing for at least 15 minutes with clean water. Be sure to rinse the undersides of your eyelids. Failure to rinse off liquid may result in blindness or impaired vision. If your eyes become irritated or painful, seek medical attention immediately.
- If ink, maintenance washing liquid, waste ink, or any other liquid used in the product enters your mouth or is swallowed, gargle with water immediately. Do not induce vomiting. Seek medical attention promptly. Inducing vomiting may cause liquid to enter the airway.
- If a large amount of vapor is inhaled, move to a well-ventilated area, keep warm, and rest in a posture that allows easy breathing. If the condition does not improve, seek medical attention promptly.
- Safety is evaluated by our recommended ink. Please use our recommended ink for safe use.
- If the ink cartridge is moved from a cold place to a warm place, leave it in the room temperature for three hours or more before using it.
- Keep ink cartridges in a cool and dark place.
- Keep ink cartridges and waste ink tank out of reach of children.
- Be sure to thoroughly consume the ink cartridge within 3 months after opening it. If it has passed for a long time after opening, the print quality would be poor.
- When you no longer need ink cartridges, ink packs, and waste ink, please hand them over to your distributor or service representative. If you dispose them by yourself, please follow the regulations stipulated by the industrial waste disposer or the local regulations of each country.
- Make sure that you shake the white and silver ink cartridges several times before printing.
- Do not hit the ink cartridge strongly or shake it violently. Ink may leak from the cartridge.
- Do not refill ink in the ink pack or ink cartridge. We are not responsible for any problems caused by using refilled ink.
- Do not touch or stain the contact area of the ink cartridge PCB. It may cause a PCB failure.
- Do not disassemble the ink cartridges.

Insert an ink cartridges.

1. Shake the ink cartridge as shown.

   - When you use white or silver ink:
     When 24 hours have passed with the power supply is ON, or, when the power supply is ON, the message is displayed. As the component of white and silver ink are easy to settle out, it is necessary to shake it periodically.

     ![Shake white / silver ink Cartridges](ENT)

   - When using orange ink:
     As orange ink components precipitates easily compared to the other colors, please shake the following cases.
     - Around once a week
     - 24 hours after the last printing
     - If using a solvent ink (SS21/ES3) other than the above: Shake about once a month.
     - If you use Sublimation dye inks (Sb53/Sb54) other than the above colors: Shake about once a week.

2. Insert the ink cartridge.

   - Insert the ink cartridge lengthwise with the surface having ink IC chip pointing to the left side.

   - Colors are displayed on the display as follows.
     - For ink cartridge setting order, refer to P.7-5"Setting orders of ink cartridges".
Chapter 1 Before Use

Changing an ink cartridge

Perform as follows when [INK END] or [INK NEAR END] is displayed on the display.

- **When [INK END] is displayed**
  1. Pull out an ink cartridge to be replaced.
  2. Insert a new ink cartridge, paying attention to the direction of ink IC chip.

- **When [INK NEAR END] is displayed**
  There is a little of ink left. It is recommended to replace the ink cartridge soon since ink may become empty in printing while printing is continuously enabled.
  - During [INK NEAR END] is displayed, Auto cleaning does not operate. (P.3-9)

For Ink cartridge lamps

The condition of the ink cartridges set in the machine is confirmable with lamps located over the ink cartridges.

![Ink cartridge lamps]

<table>
<thead>
<tr>
<th>Condition of Lamp</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lit to green</td>
<td>No error (ink is being supplied)</td>
</tr>
<tr>
<td>OFF</td>
<td>No error</td>
</tr>
</tbody>
</table>
| Lit or blinks to yellow | One of the following errors occurs.  
  - Ink near-end  
  - Ink end  
  - Expiration of a term of ink validity (one month) |
| Blinks to red     | Expiration of a term of ink validity (two months) |
| Lit to red        | One of the following errors occurs.  
  - No ink left  
  - No ink cartridge inserted  
  - Other ink errors (P.6-7) |

Restrictions concerning the product

The ink expiration date is indicated on the Ink cartridge. Expired ink may cause printing defects or alter the color tone. Printing is possible even if the ink has passed its expiration date. Nevertheless, we recommend replacing with new ink or use up as quickly as possible.

Example: The expiration date is April.
May: Replace with new ink or use up as quickly as possible. Printing is possible.
June (Yellow lamp illuminated): Replace with new ink or use up as quickly as possible. Printing is possible.
July (Red lamp flashing): Printing is not possible.
  - The message appears on the display.

Media

Usable media sizes and notes for handling are described.

### Usable sizes of media

<table>
<thead>
<tr>
<th>Model</th>
<th>CJV150-75</th>
<th>CJV150-107</th>
<th>CJV150-130</th>
<th>CJV150-160</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type of Recommended media</td>
<td>Label stock (paper-based) / PVC sheet (including laminated; thickness no more than 0.25 mm) / Reflective sheet (excluding high-luminance reflective sheet) / Heat transfer rubber sheet</td>
<td></td>

<td>810mm</td>
<td>1100mm</td>
<td>1371mm</td>
<td>1620mm</td>
</tr>
<tr>
<td>Minimum width</td>
<td>210mm</td>
<td>210mm</td>
<td>210mm</td>
<td>210mm</td>
</tr>
<tr>
<td>Maximum printing width</td>
<td>800mm</td>
<td>1090mm</td>
<td>1361mm</td>
<td>1610mm</td>
</tr>
</tbody>
</table>

**Condition of Lamp**

| Thickness | 1.0mm or less |
| Roll outside diameter | Φ250mm or less (paper media) Φ210mm or less (others) |
| Roll weight | 40kg or less |
| Roll inside diameter | 3 or 2 inches |
| Side printed | Side facing outward |
| Roll end treatment | The roll end is gently fixed to the core with weak-adhesive tape or weak glue for easy removal. |

*1. When the MARGIN(RIGHT/LEFT) setting has been set to the minimum (-10 mm).

Caution in handling of medias

Pay attention to the followings for handling of medias.

- Use recommended media.
  Use our recommended media to print with stable and high image quality.
- Pay attention to the expansion and contraction of the media.
  Do not use media that has just been opened. The media may expand and contract depending on the room temperature and humidity. Open the package and expose it to the place of use for at least 30 minutes before attaching it to the unit.
- Do not use curled media.
  In addition to causing media jams, it also affects the image quality.
  Also, use media with tight curls after removing the curls. If a regular-sized coated sheet of media is rolled and stored, the coated side has to face outside.
- Be careful to dusts on the edge face of the media.
  Some rolls have dusts contained in the package gathered on the edge surface of the roll. If you use as it is, the drawing quality may be degraded due to nozzle missing or ink drops. Be sure to set the roll after removing dusts adhering on the edge face of the roll.
- Be careful to dusts on the edge face of the media.
  Some rolls have dusts contained in the package gathered on the edge surface of the roll. If you use as it is, the drawing quality may be degraded due to nozzle missing or ink drops. Be sure to set the roll after removing dusts adhering on the edge face of the roll.
**Menu mode**

This machine has 4 modes. Each menu mode is described below.

**NOT-READY mode**

This is the mode in which the media has not been detected yet.

**LOCAL mode**

Local mode is the mode for the drawing preparation state.  
All the keys are effective.  
The machine can receive data from the computer. However, it does not perform printing.

**Screen display in Local mode**

<table>

<td></td>
</tr>
</tbody>
</table>

This mode permits the following operations:

- Pressing the JOG keys to set up a drawing origin and drawing area.
- Pressing the [ENTER] key to check the remaining amount of ink, the description of the cartridge error, the model name, the firmware version, and so on.

**MENU mode**

To set MENU mode, press the [FUNC1] key when this machine is in LOCAL mode.  
In this mode, each function can be set.

**REMOTE mode**

This machine prints the data it receives.
This chapter describes procedures and setting methods for ink and media preparation, and printing.

Turning the Power ON/OFF

Turning the Power ON

This machine is provided with the following two power switches:
- **Main power switch**: It is located on the side of this machine. Keep this switch ON all the time.
- **[END/POWER] key**: Normally, use this key to turn the power ON/OFF. The nozzle clogging prevention function periodically operates even with the [END/POWER] key turned OFF when the main power switch is turned ON.

1. **Turn the main power switch ON.**
   - Set the main power switch located on the side of this machine to the “I” side.
   - The firmware version is displayed when the power is turned ON, and the machine performs its initial operation.

2. **Turn the power on, by pressing the [END/POWER] key.**
   - The machine enters LOCAL.

3. **Turn ON the power of the connected PC.**
   - Turn the power ON after the front cover and maintenance cover are closed.
   - The head nozzle may result in nozzle clogging if the main power switch is left OFF for a long time.

Turning the Power OFF

When having ended the operation of the machine, turn the power OFF by pressing the power switch located on the front side.

Check the following items when turning the power OFF:
- If the machine is receiving data from the PC or if there is any data that has not been output yet
- If the head has returned to the capping station
- If any error has occurred
  (P.6-7 “Ink Error”)

1. **Turn OFF the power of the connected PC.**

2. **Turn the power off, by giving the [END/POWER] key a long press.**
   - Do not turn OFF the main power switch located on the side of the machine.
   - To use this machine again, press the [END/POWER] key.

Cautions about Turning the Power OFF

- **Do not turn the main power switch OFF.**
  When the main power switch is ON, the power periodically turns ON and the nozzle clogging prevention function (flushing function) operates. When the main power switch has been turned OFF, the auto maintenance functions, such as flushing, do not operate, and this may cause nozzle clogging.
- **Turn the power OFF after having checked the position of the head.**
  If the power is turned OFF in a state where the head has not returned to the capping station, the ink head dries, which may cause nozzle clogging. In this case, turn the power ON again and check that the head has returned to the capping station, and turn the power OFF.
- **Do not turn the power OFF during printing or cutting.**
  The head may not return to the capping station.
- **After having turned the power switch OFF by pressing [END/POWER] key, turn the main power switch OFF.**
  When turning the main power switch off for moving the machine or for solving the error or the like, press the [END/POWER] key a long time on the front of the machine, check the display is turned off on the operation panel, and turn the main power switch off.
Chapter 2 Basic Operation

Setting a Media

This machine can be used with a roll media and leaf media. For usable medias, refer to P.1-10 “Usable sizes of media”.

- Take care not to drop the media on your foot when setting the media. It may cause an injury due to the weight of the media.
- When setting a roll media, work by two or more people. Otherwise, you may hurt your back by the weight of the roll media.
- Adjust the head height prior to setting the media. If the head height is adjusted after the media is set, this may cause a media jamming, deterioration of the print quality or head damage.
- The range of the initial head height is adjustable by 2 levels according to the purpose of use.
- The range of the printing height of this machine is from L range (2 mm/3 mm) to H range (3 mm/4 mm). (Set to L range 2 mm at shipping)

Adjusting the Head Height

Adjust the head height according to the thickness of the media you use.

1 Move the carriage to the platen.
   - When the device is turned ON: Execute [ST.MAINTENANCE - CARRIAGE OUT] of the Maintenance functions. (P.5-8 Step1,2)
   - When the device is turned off: Open the front cover, then move the carriage by hand.

2 Loosen the screw in front.
   - Loosen the screws, rotating each by one turn of a standard screwdriver.

3 Adjust the height-adjusting lever according to the media.
   - Adjust the position of the lever, referring to P.2-4 “For the Adjusting Lever and the Range”.
   - Set the height-adjusting lever to the highest stage or the lowest stage. Setting it to the intermediate height, a printing fault can result.

4 Fix the carriage.
   - Fasten the screw securely.
   - If you set the height-adjusting lever to the H range or L range, do not push the lever upward or downward when you tighten the screw.

5 Return the carriage to the station position.

For the Adjusting Lever and the Range

Adjusting the Position of the Pinch Roller According to the State of a Media

Adjust the position of the pinch roller according to the width of the media to be set. This machine feeds the media with a pinch roller and grid roller for printing or cutting. The pinch roller should be above the grid roller.

- When setting the media, do not place the pinch roller that has been removed from the media on the grid roller. (Move the pinch roller as shown in the illustration "X" in "How to Adjust the Pinch Roller"). Operating the printer with the media not gripped between the pinch roller and grid roller could wear the pinch roller out.

How to Adjust the Pinch Roller

Move the pinch roller unit to adjust the position of the pinch roller. Use the pinch roller guide mark for positioning.

To adjust the pinch roller from the front side:

To adjust the pinch roller from the rear side:
Media Size and the Grit Roller (CJV150-160)

The grit roller positions are determined by the size of the media.

- To feed the media smoothly, select the grid roller positions so that the media can be held at equally spaced intervals.
- When the grid rollers to be used are determined, adjust the pinch roller unit referring to "How to Adjust the Pinch Roller" of P. 2-17.
- You can use any number of pinch roller units from 2 to 7.
- Adjust the pinch roller of both ends so that they are within the range of 10cm from media left end and 2cm from media right end. If adjusting them to the further position, it will remain uncut when cutting the media.
Media Size and the Grit Roller (CJV150-130)

The grit roller positions are determined by the size of the media.

- To feed the media smoothly, select the grid roller positions so that the media can be held at equally spaced intervals.
- When the grid rollers to be used are determined, adjust the pinch roller unit referring to “How to Adjust the Pinch Roller” of P. 2-17.
- You can use any number of pinch roller units from 2 to 6.
- Adjust the pinch roller of both ends so that they are within the range of 10cm from media left end and 2cm from media right end. If adjusting them to the further position, it will remain uncut when cutting the media.

Important:

Determine the grid rollers to be used according to the size of the media.

The right end of the media should come within this range.

GR : Grit roller
Media Size and the Grit Roller (CJV150-107)

The grit roller positions are determined by the size of the media.

- To feed the media smoothly, select the grid roller positions so that the media can be held at equally spaced intervals.
- When the grid rollers to be used are determined, adjust the pinch roller unit referring to "How to Adjust the Pinch Roller" of P. 2-17.
- You can use any number of pinch roller units from 2 to 5.
- Adjust the pinch roller of both ends so that they are within the range of 10cm from media left end and 2cm from media right end. If adjusting them to the further position, it will remain uncut when cutting the media.

The right end of the media should come within this range.

Determine the grid rollers to be used according to the size of the media.
Media Size and the Grit Roller (CJV150-75)

The grit roller positions are determined by the size of the media.

- To feed the media smoothly, select the grid roller positions so that the media can be held at equally spaced intervals.
- When the grid rollers to be used are determined, adjust the pinch roller unit referring to “How to Adjust the Pinch Roller” of P. 2-17.
- You can use any number of pinch roller units from 2 to 4.
- Adjust the pinch roller of both ends so that they are within the range of 10cm from media left end and 2cm from media right end. If adjusting them to the further position, it will remain uncut when cutting the media.

Determining the grid rollers to be used according to the size of the media.

The right end of the media should come within this range.

GR: Grit roller
Maximum Print Area/Cut Area

The maximum printed area/cut area varies, depending on the position of the pinch roller (P.2-6 to P.2-9) and the origin position (P.2-16). The white area shown in the following figure represents the maximum print/cut area. The area other than that is the dead space that cannot be printed/cut.

Notes When Using media Holder

Setting Position of the Media

Set the media so that the right end of the media will be inside the area shown below.

The End of the Media Should Not Exceed the Slit Line on the Platen
Setting a roll media

Set a roll media to the roll media hanger located on the back of this machine.

1 Move the roll holder located in the back of the device to the direction of the middle of the device.
   • Loosen the roll holder fixing screw and move it.

2 Check the clamp lever is lowered.

3 Move the roll holder to the roll setting position.
   • Check the media size and the position to set the media, referring to the section applicable to your machine (P.2-18 to P.2-21).

   Adjust the basic position of the roll holder so that it is placed between the guide marks of the pinch rollers.

4 Tighten the roll holder fixing screw.
   • Check the Step 2 to 3 again.

5 Set the left end of the core of the roll media on the left roll holder.
   • Push the roll media onto the roll holder until the roll core is all the way seated.

6 Loosen the screw of the right side roll holder then insert the holder into the core of the roll media.

7 Raise the clamp lever in the rear of this machine.

8 Insert the roll media in this machine.
   • The roll media can be smoothly inserted by slanting the media.

   (1) Pull the media out of the roll to the head of the platen.
   (2) Insert the media between the platen and the pinch roller.
      • Pull the media out of the roll so that the media can be grasped from the front of the machine.
   (3) Push down the clamp lever from the back of this machine.
      • The media is held.

   • Set the pinch roller units so that the media can be held at equally spaced intervals. If the pinch rollers cannot be set at equally spaced intervals, start over from Step 3.
   • Ensure there is a dead space of 5 mm or above at each end of the media. (P.2-10)
Pull out the roll media out.
(1) Open the front cover.
(2) Raise the clamp lever from the front of this machine.
(3) Pull out the roll media gently and stop pulling when locked lightly.

Make the roll media even then lower the clamp lever.
- Pulling several positions of the media lightly. Lower the clamp lever after confirming that the amount of the roll media pulled out is almost even.

Hold the media with the media press gently.
- Set the media so that no media sticks out from the right end pinch roller to the right side.
- When using a thick media, remove the media press from the media before printing.
- Do not use the media holder when cutting media.

Set an empty core of the roll media on the take-up device.

Press the <key> key to select “ROLL”.
- Detects the media width.
- When [MEDIA DETECT] of the machine setup is “MANUAL” (P.3-13), refer to P.2-13 “Setting of the manual media width setting” and enter the media width.

When the media width detection is complete, use <key> to enter the number of the pinch rollers you are using.
- When the pinch roller number in “MEDIA DETECT” of the machine setup is set to OFF (P.3-13), the screen to enter the number of pinch rollers is not displayed. Proceed to step 16.

Press the <key> key.
- When [MEDIA RESIDUAL] of the machine setup is “ON” (P.3-13), the screen for entering media remaining amount is displayed after pressing [ENTER] key. (P.2-13)
Secure the media on the take-up device.  
(P.2-14)

(1) Feed the media up to the core of the roll media of  
the take-up device by pressing the [▼] key.
(2) Fix the middle of the media with adhesive tape.
(3) In the same manner, fix the left side and right side  
of the media.
• Make sure that there is no slack or wrinkle on the  
media in such condition that the roll media is pulled  
to right and left evenly, and stick the tape.

Setting the pinch roller pressure

After setting the media in place, set the pressure of the pinch  
r rol lers that retain the media.  
Be sure to set a pressure value that is appropriate for the media.  
With an inappropriate pinch roller pressure value, the media  
could skew during printing or cutting, or the pinch rollers could  
remain on the media after pinching.
You can set the following items in pinch roller pressure settings:

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting value</th>
<th>Outline</th>
</tr>
</thead>
</table>
| NUMBER FOR USE   | 1 ~ 7         | Set the number of the pinch rollers you are using. This number differs  
                  | depending on the model you are using.                                  |
| PRINT            | LOW/ MID/ HIGH | Set the pinch roller pressure for printing.                             |
| CUT: ENDS        | LOW/ MID/ HIGH | Set the pressure of the edge pinch rollers (left and right edges) used  
                  | when cutting the media.                                                |
| CUT: INNER       | OFF/ LOW/ MID/ HIGH | Set the pressure of the pinch rollers except for the edge pinch rollers  
                  | used when cutting the media.                                          |
| CHANGE EXECUTION | PRINT/ CUT    | Switch between the setting for printing and cutting.                   |

Press the [FUNC] (PR) key in LOCAL.

1 Press the [▼] to select setting item, and  
press the [ENTER] key.

2 Press [▲▼] to select the setting  
value.

3 Press the [ENTER] key.

4 Press [/Page], to end the setting.

5 If you want to switch to another setting  
immediately, press [▼].

Entering the media remaining amount

When [MEDIA RESIDUAL] of the machine setup is “ON”  
(P.3-13), the screen for entering media remaining  
amount is displayed after detecting the media width.

1 Display the screen for entering media  
remaining amount.

2 Press [▲▼] to enter the media  
remaining amount.

3 Press the [ENTER] key.

Setting of the manual media width setting

When [MEDIA DETECT] of the machine setup is  
“MANUAL” (P.3-13), set the media width in the  
following method.

1 Display the screen for entering the right  
edge position of the media.

2 Press [▲▼] to enter the right edge  
position of the media.

3 Press the [ENTER] key.

4 Press [▲▼] to enter the media the left  
edge position of the media.

5 Press the [ENTER] key.

• Be careful not to set the position beyond the media  
range, as it may cause printing or cutting outside  
the media.
Chapter 2 Basic Operation

About the media residual print

When [MEDIA RESIDUAL] of the maintenance function is “ON” (P.3-13), You can print a list of print the current date and media remaining.

1. In Local, Press .
   • It enters into the origin setting mode.

2. Press the FUNC key.
   • Appear the confirmation screen of media remaining print.

3. Press the ENTER key.
   • Media residual print starts.

Take-up device

With the switch of the narrow take-up device, select the take-up direction of the media or others.

<table>
<thead>
<tr>
<th>Direction selector switch</th>
<th>UP (REVERSE)</th>
<th>The take-up device winds the media with the printed side facing in.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>DOWN (FORWARD)</td>
<td>The take-up device winds the media with the printed side facing out.</td>
</tr>
<tr>
<td>ON/OFF button</td>
<td></td>
<td>Turns the winding motion on/off. (When you press the button and operate the take-up device, the device keeps taking up the media until you press the button again. *)</td>
</tr>
</tbody>
</table>

*1. You can also change the setting so that the taking-up operation only lasts while the ON/OFF button is being pressed. For details, refer to "Setting Take-up unit" (P.3-12) in machine settings.

Setting the torque limiter

The take-up device is provided with a torque limiter. The take-up torque can be adjusted with the torque limiter. (The torque limiter is set to “media” at delivery.) If the tension is too strong to use a thin media of media, lower the take-up torque with the torque limiter.

Clockwise turn :
Increases torque (a heavy and thicker media such as tarpaulin or the like)

Counterclockwise turn :
Decreases torque (For light media)

When Not Using Taking-up Device

- When performing printing or cutting of 700 mm or more without using the taking-up device, evacuate the taking-up device to right and left. The quality of the print and cut may become low because of the impact when the front end of the media touches the taking-up device.
Setting leaf media

Unlike roll media, leaf media does not need to be retained with the roll holders.

1. Raise the clamp lever.

2. Insert the leaf media between the platen and the pinch rollers.
   - Set the media so that no media sticks out from the right end pinch roller to the right side.

3. To print, hold the media with the media press gently.
   - Set the media so that no media sticks out from the right end pinch roller to the right side.
   - When using a thick media, remove the media press from the media before printing.
   - Do not use the media holder when cutting media.

4. Push down the clamp lever.
   - Set the media straight.

5. Press the ENTER key.

6. Press the key to select "LEAF".

7. The media detection is started.
   (1) The media width is detected.
   (2) The media is fed then the rear end of media is detected.
   (3) It returns to the Local when the detection is completed.

   • Set the pinch roller so that the media is held at equally spaced intervals. If the pinch rollers cannot be set at equally spaced intervals, start over from Step 2.
   • Ensure there is a dead space of 5 mm or above at each end of the media. P.2-10.

   • Set the media on the black part of the platen so that it comes out approximately 40mm. If it is shorter than that, it may not be able to perform the media detection.
Chapter 2 Basic Operation

Notes when using media press

- When installing the media, align the media’s right edge with the slit line in the platen. Placing the media rightward of the slit line will make it rise up if it moves obliquely, and this could cause damage to the head.
- If a media is misaligned to the right/left more than fixed position, a error message "MEDIA SET POSITION R" is displayed. Set the media again.

Typical setting position of printing origin

The printing origin in the depth direction (X') is positioned at about 75 mm rearward from the slot for cutting on the platen. The printing origin in the scanning direction (Y') is positioned at 15 mm from the right end of the media. The value in the scanning direction (Y') can be changed using [MARGIN] in FUNCTION mode. (P.3-8)

This can be changed by using the Jog key.

Changing the printing origin

The position of the printing origin can be changed. Moving the LED pointer to the changing position and deciding the position.

In Local, Press.

1. It enters into the origin setting mode.

<table>
<thead>
<tr>
<th>SET ORIGIN</th>
<th>X</th>
<th>Y</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>0.0</td>
<td>0.0</td>
</tr>
</tbody>
</table>

2. Set a light point of the LED pointer to the changing position by pressing.

- Select the carriage and media, moving the point with [▲][▼][◄][►].

3. After determining the origin, press the key.

- The printing origin is changed.

Preparing for the Heaters

Changing the Temperature Settings for the Heaters

You can change/save the temperature settings for the heaters with "Heater" of the setting mode. (P.3-6)

Here, changing method of the temperature set in the setting mode is explained.

Set the heater temperature according to the characteristics of the media you use.

The temperature of the heaters has been set to "OFF" as default.

Appropriate temperature adjustment can be made because the temperature can be adjusted even during printing.

It may take several minutes to tens of minutes for the set temperature to be reached, depending on the ambient temperature.

1. Press the key, and press the (Heater) in LOCAL.

- The heater temperature adjustment screen will be displayed.

2. Press to set the temperature of each heater.

   - Heater selecting: Select with [◄][►]
   - Temperature setting: Set with [▲][▼]

   - The heater starts to get hot.

3. When the heater temperature reaches the set temperature, the heater icon lights in green.

4. Press the key to stop heating.

- The screen returns to LOCAL.
Test Printing

Print a test pattern to check that there are no discharging defects such as nozzle clogging (slight touching of ink or nozzle missing).

**Relationship between head row and test pattern**

The relations between head row and test pattern print position are as follow.

**About test patterns**

This machine provides you two test patterns.

- **Normal test pattern (when using ink other than white ink)**
  
  When you use ink that you can check by printing a test pattern on a white media, print this test pattern.

- **Test pattern for checking white ink**
  
  When you use a white media and wish to check discharging status of white ink, print this test pattern.

**Note on test printing**

- When using leaf media, set a media of more than A3 size put horizontally. If a media with narrow width is set, printing will only be conducted to midway.
- When using a roll media, rewind the media by hand before printing so that it is not loose. When the roll media has not been rewound tightly, it may cause image quality to deteriorate.
Perform test printing with the normal test pattern

1. Press the (TEST PRINT/CLEANING), and press the key in LOCAL.
   - TEST PRINT MENU will be displayed.
   - Press [▲▼] to change the test pattern orientation. The orientation selected here will be reflected on when you will print next time.
   - When performing test printing after having changed the orientation from "SCAN DIR." to "FEED DIR.", the line is fed to the position of the first test printing.

2. Press the key.
   - Test printing starts.
   - When the printing has been completed, the screen returns to LOCAL.

3. Check the printed test pattern.
   - When the result is normal, end the operation.
   - When the result is abnormal, perform head cleaning. (P.2-19)

Normal pattern

Abnormal pattern

Nozzles are dirty
Clogged with ink

Perform test printing with the test pattern for checking white ink

It makes easier to check if print the background to the white ink locations in the pattern.

1. Press the (TEST PRINT/CLEANING), and press the key in LOCAL.
   - TEST PRINT MENU will be displayed.

2. Press ▲▼ to select “SpotColor Check”.

3. Press the key.
   - Print a test pattern in the following orders.
     (1) Print the pattern daubed with black.
     (2) Dry the pattern for thirty seconds.
     • When press the [ENTER] key, cancel waiting time and shift to step (3).
     (3) Return the media automatically and print the test pattern.

4. Check the printed test pattern.
   - When the result is normal, end the operation.
   - When the result is abnormal, perform head cleaning. (P.2-19)

Normal pattern

Abnormal pattern

Nozzles are dirty
Clogged with ink
Head Cleaning

About head cleaning
Check the printed test pattern result and perform cleaning depending on the status. Select one from the four types below:

- **NORMAL**: When any line is missing
- **SOFT**: When only head wiping is needed (when lines are bent)
- **HARD**: When poor image quality cannot be improved even by NORMAL or SOFT cleaning
- **ULTRA**: When poor image quality cannot be improved even by HARD cleaning

Perform head cleaning depending on the test printing result

There are four types of head cleaning. Use one by checking the test pattern.

1. **Press the** \( \text{FUNC}\) (TEST PRINT/CLEANING) \( \downarrow \uparrow \) \( \text{ENTRY} \) key in LOCAL.
   - CLEANING MENU will be displayed.

2. **Press** \( \downarrow \uparrow \) to select the cleaning type.
   - **NORMAL**: Select this if any line is missing.
   - **SOFT**: When only head wiping is desirable. (in case of bent lines)
   - **HARD**: Select this if inferior printing cannot be improved even by [NORMAL] or [SOFT] cleaning.
   - **ULTRA**: Select this if inferior printing cannot be improved even by [HARD] cleaning.

3. **Press the** \( \text{ENTRY} \) key.

4. **Perform test printing again, and check the result.**
   - Repeat the cleaning and the test printing until the printing result becomes normal.

   When the image quality is not improved after the head cleaning.
   - Clean the wiper and ink cap. (\( \text{P.5-8} \))
   - Wash the head nozzle. (\( \text{P.5-9} \))

---

Setting of Media Correction

Correct the media feed amount to match the type of media you are using. If the correction value is not appropriate, stripes may appear on the printed image, thus resulting in a poor printing.

1. **On completion of** [MEDIA COMP.] during use of a roll media, the media returns to the printing origin. Then the roll media in the rear of this machine will slacken.
   - Before printing, take up the slack in the roll media by hand; a loose roll media can result in an inferior image quality.
   - When printing with a take-up device, set the media first and perform media correction.

2. **Two bands are printed in the correction pattern.**
   - Make adjustment so that an even color density is obtained in the boundary between the two bands.

---

Setting of Media Correction

A pattern for media correction is printed and a media-feeding rate is corrected.

1. **Set a media.** (\( \text{P.2-4} \))

2. **Press the** \( \text{SEL} \) key, and press the **\( \text{FUNC}\) (ADJUST)** in LOCAL.
   - ADJUST MENU will be displayed.

3. **Press the** \( \text{ENTRY} \) key twice to print the correction pattern

4. **Check the correction pattern and enter a correction value.**
   - A screen for entering the correction value will be displayed.
   - **Enter a correction value in “+”**: The boundary between the two bands is widened.
   - **Enter a correction value in “-”**: The boundary between the two bands is narrowed.
   - When you change the correction value by “30”, the width of the boundary changes by about 0.1 mm.
Chapter 2 Basic Operation

If the Positions of Dots Shift...

When the condition for printing (media thickness/ink type/etc.) has been changed, perform the following operation to correct the ink drop position for bidirectional (Bi) printing and obtain the proper printing result.

- When using leaf media, set a media of more than A3 size put horizontally. If a media with narrow width is set, printing will only be conducted to midway.

Example of a Printed Pattern

1. Press the SEL key, and press the (ADJUST) in LOCAL.
   - ADJUST MENU will be displayed.

2. Press \downarrow, and press the ENTER key.
   - “DROP.POScorrect” will be selected.

3. Press the ENTER key.
   - Printing of the Drop position correct printed pattern will start.
   - Multiple test patterns are printed. (The printed patterns are called Pattern 1, Pattern 2, Pattern 3... in the order of printing.)

4. Press \uparrow,\downarrow,\rightarrow,\leftarrow to enter a correction value of Pattern 1, and press the ENTER key.
   - Corrected feeding rate: -40 to 40
   - Check the test patterns. The position where an outward feeding line and a return feeding line become one straight line is the correction value.
   - When the correction value is not between -40 and 40, adjust the height of the printing heads and perform the operations in Step 2 and later.

5. In the same way as in Step 4, enter a correction value of Pattern 2 and later, and press the ENTER key.

6. Press the END/POWER key several times to end the setting.

Printing Data

Starting a Printing Operation

1. Setting a Media (P.2-4)

2. Press the FUNC(REMOTE) key in LOCAL.
   - The screen changes to REMOTE, and data can be received from the PC.

3. Transmit data to be printed from the PC.
   - For the method of data transmission, see the instruction manual for the output software.

4. Start printing.
   - The printing speed may change, depending on the width of the set media or the position of the print origin even when the same data is printed. This is because of a difference in resolution.
Stopping a Printing Operation
Perform the following operation when stopping a printing operation halfway.

1. Press the **Func** (LOCAL) during printing.
   - The printing operation stops.
   - Interrupt data sending at the PC side during the data is sent from the PC.
   - Printing restarts from the interrupted data by repressing the [REMOTE] key.

Deleting Received Data (Data Clear)
When you want to stop printing, delete the already received data.

1. Press the **Sel** key, and press the **Func** (DATA CLEAR) in LOCAL.
2. Press the **Enter** key.
   - The received data is erased then it returns to the Local.

Cutting a media
By using the keys on the operation panel, you can cut the media at any position.

1. In Local, press **a, b, c, d, e**.
   - It enters into the origin setting mode.
   - By pressing **v**, feed the media to the cutting position.

2. Press the **Func, Enter** key.
   - The media is cut.
   - When the cutting has been completed, the current mode returns to LOCAL.
Workflow of cutting

- **Turning the Power ON/OFF**
  - Referring to “Turning the Power ON/OFF” (P.2-3).

- **Setting a Media**
  - Referring to “Setting a Media” (P.2-4).

- **Installing Tools**
  - Referring to “Installing Tools” (P.2-23).

- **Setting the cutting conditions**
  - Referring to “Setting the cutting conditions” (P.2-26).

- **Test Cutting**
  - Referring to “Test Cutting” (P.2-28).

- **Cutting Data**
  - Referring to “Cutting Data” (P.2-28).
Installing Tools

This machine allows you to use the following tools:

**Cutter:**
This tool is selected when an image printed on a media is cut or when letters are cut with a cutting media.

**Pen (water-based ballpoint pen):**
This tool is used to perform “test printing” for checking how images or letters are cut actually.

### When a Cutter Is Used

- **Caution:**
  - Do not touch the cutter with your fingers. The sharp blade edge of the cutter may cause you to get injured.
  - Do not shake the tool after having set the cutter. Otherwise, the blade edge may pop out, causing you to get injured.
  - Store the cutter blade in a place that is out of the reach of children. In addition, dispose of used cutter blades according to regional laws and regulations.

**How to install a cutter**

1. **Remove the cap located at the edge by rotating it, and replace the cutter with a new one using tweezers or the like.**

2. **Turn the adjusting knob to adjust the protruding amount of the cutter.**
   - arrow to protrude the cutter blade. (0.5 mm per revolution)

**Important:**
- See the appendix for the blade adjustment of the cutters other than the auxiliary products. (P.5-22)

**Protruding amount of the cutter blade**

\[
\text{Amount of cutting} = \frac{\text{Film thickness} + \text{Base paper thickness}}{2}
\]

- However, Film thickness < Base paper thickness

For reference:
the protruding amount of the cutter blade = 0.2 to 0.5mm (Replace the blade when it is blunt.)

**Important:**
- Adjust the blade pressure so that the cutter may leave a little bit of cutter track on the sheet.
- In case the sheet thickness is thinner than the film thickness, which may not provide correct cutting quality, change the protruding amount of the blade and you may get a better result.
Chapter 2 Basic Operation

How to install the cutter holder

1. Press the (FUNCTION) (MENU) ➔ (FUNCTION) (ENTER) key in LOCAL.
   • Cutting MENU will be displayed.

2. Press ▲ ▼ to select “TOOL REPLACE”, and press the ENTER key.

3. Press the ENTER key.
   • The cutter unit moves to the left end of the machine.

4. Rotate the knob to loosen the holder presser.

5. Insert the cutter holder into the tool holder.
   • Push the brim of the cutter holder against the tool holder.
   • Press the brim of the cutter holder with the holder presser.

6. Fix the cutter holder.
   • Turn the knob of the tool holder clockwise, and surely fix it.
   • Fix the cutter holder firmly. If not, accurate and high-quality cutting will not be achieved.

How to Install a Ballpoint Pen

1. Put the cap on the pen adapter.
   • Use the cap to adjust the pen height.

2. Insert the pen into the pen adapter.
   • Insert the pen until the tip of the pen reaches the cap.

3. Fix the tip of the pen.
   • Tighten the fixing screw clockwise.
   • Be careful not to over-tighten the fixing screw for the pen adapter. If tightened too much, the ball-point pen may crack.

4. Remove the cap.

5. Press the (FUNCTION) (MENU) ➔ (FUNCTION) (ENTER) key in LOCAL.
   • Cutting MENU will be displayed.

   Important:
   - When you want to use a commercially available ballpoint pen, you must use the pen of 8mm to 9mm in diameter. Image quality may depend on the pen. (Recommended ballpoint pen: the one available from Pentel Co., Ltd. with the product No.: K105-A, K105-GA)
   - Regarding such ballpoint pens as shown below, the pen inclines to touch the cover when held by the pen adapter (the pen that the pen holder girth of which may vary, the pen that the pen holder of which has umbo and differences)
Press \[ \nLeftarrow \n\Rightarrow \n\Uparrow \n\Downarrow \n\] to select “TOOL REPLACE”, and press the \[ \text{ENTER} \] key.

Press the \[ \text{ENTER} \] key.

- The cutter unit moves to the left end of the machine.

Rotate the knob to loosen the holder presser.

Insert the pen adapter with the pen into the tool holder.

- Make sure that the brim of the pen adapter is rested on the tool holder.
- Set the adapter in such a way that the fixing screw will not obstruct operation.
- Press the brim of the pen adapter with the holder presser.

Turn the knob clockwise to fix the tool.

- Turn the knob of the tool holder clockwise, and surely fix it.
- Instead of the ballpoint pen, you can attach the refill that comes with it.
  Follow the procedure below to attach the ballpoint pen refill to the pen adapter, then put it into the tool holder in the same way as in step 6.

  1. Insert a spring into the pen tip.

  2. While pressing the cap onto the spring, attach it on the pen adapter.

      - Rotate the cap to the direction indicated with an arrow and attach it on the pen adapter.

      - When you replace the ballpoint pen (SPB-0726), contact a distributor in your district or our office to call for service.

Insert until it is rested
Setting the cutting conditions

You can register the cutting speed and the pressure depending on the sheet or the tool type to be used.

(Cut condition)

About the Cut Conditions

Items you can set here

<table>
<thead>
<tr>
<th>Tool condition</th>
<th>You can select the cutting condition No. (1 to 7) or plotting condition (PEN).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cut speed</td>
<td>Setting of the speed of cutting.</td>
</tr>
<tr>
<td>Cut press</td>
<td>Setting of the pressure required for cutting. (g)</td>
</tr>
<tr>
<td>Offset *1</td>
<td>Setting of the distance from the center of the cutter holder to the cutter blade.</td>
</tr>
<tr>
<td>Half cut *2</td>
<td>Setting of enabling (ON)/disabling (OFF) the half-cut function.</td>
</tr>
<tr>
<td>Half cut press</td>
<td>Setting of the pressure of left part. (g)</td>
</tr>
<tr>
<td>H-leng</td>
<td>Setting of the length to be left (not to be cut). (mm)</td>
</tr>
<tr>
<td>C-leng</td>
<td>Setting of the length to be cut. (mm)</td>
</tr>
</tbody>
</table>

*1. You cannot set this when "PEN" is selected in the tool condition.

*2. The three items in the lower level are available when the half-cut is set to ON.

About Selecting Cutting Condition

1. Press the \( \text{SEL} \) key to display “TOOL” in LOCAL.

2. Press \( \text{FUNC1} \) to display the cut condition.

   • The three items shown in the following screen are not displayed unless the half-cut is set to ON.

<table>
<thead>
<tr>
<th>CUT CONDITION</th>
<th>TOOL</th>
<th>SPEED</th>
<th>PRESSURE</th>
<th>OFFSET</th>
<th>HALF CUT</th>
<th>PEN</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>CUT1</td>
<td>30cm/s</td>
<td>60g</td>
<td>0.30mm</td>
<td>ON</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CUT CONDITION</th>
<th>HALF CUT PRESSURE</th>
<th>H-LENG</th>
<th>C-LENG</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>80g</td>
<td>2.0mm</td>
<td>20mm</td>
</tr>
</tbody>
</table>

3. About Half Cutting

   You can cut on the dotted line, not to cut sheet out. (Half cut)
   When you set half cut to valid (ON), you can use the half cut function.

   • The illustration above is the image. The shape of cut surface differs depending on the cutting conditions.

Select the tool condition

Before cutting (plotting), select the tool condition depending on the sheet and the tool type to be used.

1. Press the \( \text{SEL} \) key in LOCAL to display the “TOOL” menu.

2. Press the \( \text{FUNC1} \) (TOOL).

3. Press the \( \text{ENTER} \) key.

4. Press \( \text{\uparrow} \) \( \text{\downarrow} \) to select a tool condition to be used.

   • Each time you press \( \text{\uparrow} \) \( \text{\downarrow} \), the tool condition is switched as follows.

   \[
   \text{CUT1} \sim 3 \rightarrow \text{PEN} \rightarrow \text{CUT4} \sim 7
   \]

5. Cutting.
Set the Cut Conditions

Set the condition to cut or to plot with a pen.

**Setting contents of cutting condition (CUT1 to 7):**
- Cut speed (SPEED)/ cut pressure (PRESS)/ OFFSET value/ Half cut

**Setting contents of plotting condition (PEN):**
- Plotting speed (SPEED)/ pen pressure (PRESS)

1. Press the SEL key in LOCAL to display the “TOOL” menu.
2. Press the Func (TOOL).
3. Press \downarrow to select a tool condition to be used, and press the ENTER key.
4. Press \uparrow to move the cursor to cutting speed, and press the ENTER key.
5. Press \uparrow to set the cutting speed, and press the ENTER key.
   - Set the moving speed of the tool for cutting or pen plotting.
   - **Setting values:**
     - 1 to 10cm/s (settable by 1cm/s step)
     - 15 to 30cm/s (settable by 5cm/s step)

6. Press \downarrow to move the cursor to cutting pressure, and press the ENTER key.
7. Press \uparrow to set the cutting pressure, and press the ENTER key.
   - Set the pressure that the tool presses the sheet for cutting or pen plotting.
   - **Setting values:**
     - 10 to 20g (settable by 2g step)
     - 25 to 100g (settable by 5g step)
     - 110 to 450g (settable by 10g step)

8. Press \downarrow to move the cursor to OFFSET, and press the ENTER key.
9. Press \uparrow to set the offset value, and press the ENTER key.
   - When you set the cutting condition (CUT1 to 7), set the distance between the center of the cutter holder and the blade tip.
   - **Setting values:**
     - 0 to 250 (0.00 to 2.50mm)
     - (settable by 0.05mm step)

10. Press \downarrow to move the cursor to half cut, and press the ENTER key.
11. Press \uparrow to set ON/OFF, and press the ENTER key.
   - When you perform half cut, select ON and proceed to the Step 11.
   - When you do not want to set AUTO CUT, select “OFF” and proceed to Step 17.
12. Press \downarrow to move the cursor to pressure setting of left part (not to be cut), and press the ENTER key.
13. Press \uparrow to set pressure, and press the ENTER key.
   - Set the pressure of the left part (not to be cut) when performing half cut.
   - **Setting values:**
     - 0 to 450g (settable by 5g step)

14. Press \downarrow to move the cursor to the setting of length to be left, and press the ENTER key.
15. Press \uparrow to move the cursor to the setting of length to be left, and press the ENTER key.
   - Set the length to be left not to be cut when performing half cut.
   - **Setting values:**
     - 0.1 to 5mm
     - (settable by 0.1mm step)

16. Press \downarrow to move the cursor to the setting of cut length, and press the ENTER key.
17. Press \uparrow to set the cut length, and press the ENTER key.
   - Set the length to be cut when performing half cut.
   - **Setting values:**
     - 5 to 150 mm
     - (5 to 20mm: 1mm step, 20 to 150mm: 5mm step)

18. Press END/POWER the key to register the set contents.
   - Return to the local.
   - The set value is retained even when the power is turned “OFF.”
Chapter 2 Basic Operation

Test Cutting

Execute test cutting to confirm the tool conditions.
In the test cutting, the machine cuts two squares.

- When the cutter blade is worn and dull, you can use it temporarily by enhancing the value of PRESSURE. However, you are recommended to replace the worn cutter blade with a new one to ensure a satisfactory cutting quality.

When the tool conditions are proper, the results of test cutting are as follows:
- The two squares are cut perfectly.
- The base media remains uncut.
- No corner of the squares is rounded.
- No corner of the squares is curled-up.

Press the SEL key in LOCAL to display the “TEST CUT” menu.

Press the FUNC TEST CUT).

Press the ENTER key.
- The machine will execute test cutting and return to the local mode display.

Change the settings of the cut conditions according to the test cutting results.

Cutting Data

You can start cutting after completion of setting up a tool, a media and the tool conditions.

Setting the origin

The origin is a reference point for the cutting data.
When the origin is changed, set the new origin before starting cutting.

- Change the origin before cutting the next data; otherwise, cutting will be performed over the previous data.

1 Move the carriage to a point at which the new origin is to be set.
- [▶]: Moves the carriage to the right.
- [◄]: Moves the carriage to the left.
- [▲]: Feeds the media to the rear of the machine.
- [▼]: Feeds the media to the front of the machine.

2 Press the ENTER key to register the origin.
- The display panel will show the effective cutting area first and the tool conditions.

Start cutting

1 After completion of setting the origin, press the FUNC REMOTE).
- The screen changes to REMOTE, and data can be received from the PC.

2 Transmit data to be cuted from the PC.
- On receiving the data, the machine performs cutting while displaying the remaining amount of the data.

Bringing the cutting to a halt

To temporarily stop the machine during cutting, press the [FUNC3] (REMOTE) key once. Another press of the key will make the machine resume cutting.

- In case the media has slipped off the machine during cutting operation, turn off the power immediately; otherwise, the main unit may be damaged.

- You cannot use the functions that include operations while pausing. In this case, let the machine complete the cutting for the remaining portion of the data or discontinue the cutting by executing data clearing (P. 2-29).

<table>
<thead>
<tr>
<th>Cut Condition</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Some parts uncut.</td>
<td>The blade is lifted above the media because of a too high cutting speed.</td>
<td>Lower the speed. (P.2-27).</td>
</tr>
<tr>
<td>The base media has been cut.</td>
<td>Too high pressure.</td>
<td>Lower the pressure. (P.2-27).</td>
</tr>
<tr>
<td>Any of the square corners rounded.</td>
<td>Improper OFFSET value.</td>
<td>Adjust the OFFSET value so that it suits the cutter blade in use. (P.2-27).</td>
</tr>
<tr>
<td>Any of the square corners curled-up.</td>
<td>The protruded cutter blade is too much. The cutting pressure is higher. The [COMPENSATION PRESSURE OFFSET value] is large. More than two out of the above fall under this category.</td>
<td>Adjust the protrusion of the cutter blade. (P.2-23). Adjust the cutting pressure. (P.2-27). Adjust the ADJ-PRS OFS value. (P.4-9).</td>
</tr>
</tbody>
</table>
**Stopping a Cutting Operation (Data Clear)**

If you want to stop a cutting operation of the received data, clear the data.

- When clearing the data, the process will not restart even if you press the [FUNC3] (REMOTE) key.
- After clearing the data, switching to the remote mode and receiving another data, new data will be cut.
- Do not perform the data clearance during the data transmitting.
- Even after performing the data clearance, the received data is stored in the reception buffer.

1. Press the SEL key, and press the (DATA CLEAR) in LOCAL.
2. Press the ENTER key.
   - The reception buffer is cleared, and the present mode returns to LOCAL...

**Removing the Cutter Unit Temporarily**

When cutting or printing-with-a-pen job is finished, the cutter unit is on the platen. To check the result of cutting (printing-with-a-pen) or to set a new medium, follow the steps below to remove the cutter unit from the platen temporarily.

1. Press the SEL key to display the “TEST CUT” menu.
2. Press the (TEST CUT).
3. Press to select the “CUTTER HEAD MOVE/RETRACT”, and press the ENTER key.
   - The cutter unit moves from on the platen to the left end of the machine.
   - When the coupling unit is connected to the printer unit, switch the destination to the cutter unit, and move to move it to the origin position. (Moving the cutter unit)

**Cutting a media**

By using the keys on the operation panel, you can cut the media at any position.

1. In Local, Press .
   - It enters into the origin setting mode.
   - By pressing [ ], feed the media to the cutting position.

2. Press the (TEST CUT).
   - The media is cut.
   - When the cutting has been completed, the current mode returns to LOCAL.

---

About SETUP MENU

On SETUP MENU, you can set the print conditions to match the media you usually use.

- Press this to select SETUP MENU, or to switch to the previous screen.
- Press this to switch to the next screen.
- Use these to select a setting item.
- Press this to confirm a setting, etc..

◆ SETUP MENUs at-a-glance

Select “SETUP 1 to 4” or “Temporary”, and then press the ENTER key.

*1. This is the setting value to be used for printing when setting value is not specified at the RIP software (host) side, or, you give priority to the setting value at the machine side.

*2. When you set this to “100%” or more, required time for completion of printing will be shortened. However, enough drying time cannot be ensured and it may affect the image quality.
Chapter 3 Setup

Register the optimal print conditions to match the use

In this machine, you will be able to register print conditions, SETUP 1 to 4 individually to match the media in advance.

For example, after print on different types of media, return to the media always use. In such case you can set the optimum printing conditions by simply selecting the registered SETUP 1 to 4.

- Print conditions that can be pre-registered with the machine are the four types, “SETUP 1” to “SETUP 4”.
- If you print with the print condition which do not often use, you will be able to set the print conditions by selecting “Temporary”.
  - If turn on the power again, settings in “Temporary” will return to the original state when it was purchased.
  - Also if turn on the power again in “Temporary” state, it will be the state in selecting “SETUP 1”.

Register the print conditions to SETUP 1 to 4

1. Press the (FUNC) (MENU) ➔ ENTER key in LOCAL.
2. Press (▲▼) to select SETUP 1 to 4, and press the ENTER key.
   - The item selected indicates ● and others show ○.
   - SETUP MENU will be displayed.
3. Press (▲▼) to select and set each item in the setup menu list.
   - Please see the reference page in the setup menu list for detailed configuration procedure.

How to use [Temporary]

[Temporary] is not only to set the print condition to be used only once, but also can be used for partial change of the registered SETUP “1 to 4”, or for reflecting the print conditions set by the [Temporary] to SETUP 1 to 4.

Register the print conditions in [Temporary]

Registration of the print conditions to [Temporary] can be done as the same method as to SETUP 1 to 4.

1. Press the (FUNC) (MENU) ➔ ENTER key in LOCAL.
2. Press (▲▼) to select “Temporary”, and press the ENTER key.
   - SETUP MENU will be displayed.
3. Press (▲▼) to select and set each item in the setup menu list.
   - Please see the reference page in the setup menu list for detailed configuration procedure.

Copy the contents of SETUP 1 to 4 to [Temporary]

You can use it with changing the part of registration contents of SETUP 1 to 4. Select “RESET SETTING” then “COPY” from the registration screen of [Temporary], and specify the copy source (SETUP 1 to 4).

1. Press the (FUNC) (MENU) ➔ ENTER key in LOCAL.
2. Press (▲▼) to select “Temporary”, and press the ENTER key.
   - SETUP MENU will be displayed.
3. Press the (FUNC) (<<).
4. Press (▲▼) to select “RESET SETTING”, and press the ENTER key.
5. Press (▲▼) to select “COPY”, and press the ENTER key.
   - Selection screen of the copy source will be displayed.
6. Press (▲▼) to select the copy source (SETUP 1 to 4) and press the ENTER key.
   - Confirmation screen of the copy will be displayed.
7. Press the ENTER key.
8. Settings selected in step 5 is copied to Temporary.

Reflect The Content Set In [Temporary] To Setup 1 To 4

1. Press the (FUNC) (MENU) ➔ ENTER key in LOCAL.
2. Press (▲▼) to select “Temporary”, and press the ENTER key.
   - SETUP MENU will be displayed.
3. Press (▲▼) to select and set each item in the setup menu list.
   - Please see the reference page in the setup menu list for detailed configuration procedure.
4. Display the last page of Temporary and select “SAVE SETTING”, and press the ENTER key.
   - Selection screen of the save location will be displayed.
5. Press (▲▼) to select the location selected (SETUP 1 to 4), and press the ENTER key.
   - Save confirmation screen will be displayed.
Set a media. (P.2-4)

Press the \( \text{FUNC} \) (MENU) \( \rightarrow \text{ENTER} \) key in LOCAL.

Press \( \boldsymbol{\uparrow} \), \( \boldsymbol{\downarrow} \) to select SETUP 1 to 4, and press the \( \text{ENTER} \) key.

Press \( \boldsymbol{\uparrow} \), \( \boldsymbol{\downarrow} \) to select “FEED COM”, and press the \( \text{ENTER} \) key.

Press \( \text{ENTER} \) key twice to print a correction pattern.

Check the correction pattern and enter a correction value.

- A screen for entering the correction value will be displayed.
- Enter a correction value in “+”: The boundary between the two bands is widened.
- Enter a correction value in “-”: The boundary between the two bands is narrowed.
- When you change the correction value by “30”, the width of the boundary changes by about 0.1 mm.

Press the \( \text{ENTER} \) key.

- Print a correction pattern again and check it.
- When media correction is needed, perform the operation in Step 6 to make correction.

Press the \( \text{END/POWER} \) key several times to end the setting.

Correcting Media-feeding during Printing

A media-feeding rate can be corrected even in the remote mode or when image data is printed.

Press the \( \text{FUNC} \) (ADJUST) \( \rightarrow \text{ENTER} \) key in the Remote.

Press \( \boldsymbol{\uparrow} \), \( \boldsymbol{\downarrow} \) to enter a corrected feeding rate.

- Corrected feeding rate: -9999 to 9999
- The value entered here is reflected in the corrected feeding rate soon.

Press the \( \text{ENTER} \) key twice key.

- The changed value is registered.
- When you press the [ENTER] key instead of the [END] key, the value entered here will be valid temporarily. (When you perform media detection again or turn the power OFF, the correction value is cleared.)

Press the \( \text{ENTER} \) key several times to end the setting.

Setting of Media Correction

Correct the media feed amount to match the type of media you are using. If the correction value is not appropriate, stripes may appear on the printed image, thus resulting in a poor printing.

- On completion of [MEDIA COMP.] during use of a roll media, the media returns to the printing origin. Then the roll media in the rear of this machine will slacken. Before printing, take up the slack in the roll media by hand; a loose roll media can result in an inferior image quality.
- When printing with a take-up device, set the media first and perform media correction.

A pattern for media correction is printed and a media-feeding rate is corrected.

- Two bands are printed in the correction pattern.
- Make adjustment so that an even color density is obtained in the boundary between the two bands.

A pattern for media correction is printed and a media-feeding rate is corrected.

- Two bands are printed in the correction pattern.
- Make adjustment so that an even color density is obtained in the boundary between the two bands.

First band

Second band

Media feed direction
If the Positions of Dots Shift...

When the condition for printing (media thickness/ink type/ etc.) has been changed, perform the following operation
to correct the ink drop position for bidirectional (Bi)
printing and obtain the proper printing result.

Example of a Printed Pattern

1. Set a media on the machine. (P.2-4)
   • In order to print a pattern, a media that is 500 mm
     wide at least is necessary.

2. Press the (MENU) key in LOCAL.

3. Press to select SETUP 1 to 4, and
   press the key.
   • SETUP MENU will be displayed.

4. Press to select “DROP.POScorrect”,
   and press the key.

5. Press the key.
   • Start the pattern printing.
   • Multiple test patterns are printed. (The printed
     patterns are called Pattern 1, Pattern 2, Pattern
     3... in the order of printing.)

6. Press to enter a correction value
   of Pattern 1, and press the key.
   • Corrected feeding rate: -40 to 40
   • Check the test patterns. The position where an
     outward feeding line and a return feeding line
     become one straight line is the correction value.
   • When the correction value in between -40 and
     40, adjust the height of the printing heads and
     perform the operations in Step 2 and later.

7. In the same way as in Step 4, enter a
   correction value of Pattern 2 and later, and
   press the key.

8. Press the key several times to
   end the setting.

Setting the HEATER

Pre-heater /Print heater / Post-heater are equipped on the
platen.

<table>
<thead>
<tr>
<th>Type of HEATER</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pre-heater</td>
<td>Used for pre-heating of the media prior to printing to prevent rapid temperature changing.</td>
</tr>
<tr>
<td>Print-heater</td>
<td>Improves the image quality in printing.</td>
</tr>
<tr>
<td>Post-heater</td>
<td>Dries ink after printing.</td>
</tr>
</tbody>
</table>

Here, in addition to the temperature setting of each
heater, the time from the print completion until the heater
to be OFF can be set up.

1. Press the (MENU) key in LOCAL.

2. Press to select SETUP 1 to 4, and
   press the key.
   • SETUP MENU will be displayed.

3. Press to select “HEATER”, and
   press the key.

4. Set each heater temperature by pressing
   
   • Heater selecting : by the [▲][▼] keys
   • Temperature setting : by the [◄][►] keys

5. Press to select “OFFTIME”, and
   press the key.

6. Press , set the time until the
   heater to be OFF after printing, and press the key

7. Press the key several times to
   end the setting.

   • press [FUNC3] (off) in Step 3 to turn all heaters OFF.
   or, press [FUNC1] to raise all heaters by 10°C.
   • If press keys or receive data during OFF is set in
     step 6, automatically returns to the set temperature.

The dots at the fourth position counted
from the zero position in the positive
direction form a straight line.
In this case, the dot position correction
value is 4.0.

Output
direction

Type of HEATER Function
Pre-heater Used for pre-heating of the media prior to printing to prevent rapid temperature changing.
Print-heater Improves the image quality in printing.
Post-heater Dries ink after printing.
### Setting of Logical Seek

The head’s operation varies depending on the LOGICAL SEEK settings, as shown in the figure below.

**Movement of heads when LOGICAL seek is OFF**
- **UNI-DIRECTIONAL**
- **BI-DIRECTIONAL**

**Movement of heads when LOGICAL seek is ON**
- **UNI-DIRECTIONAL**
- **BI-DIRECTIONAL**

---

1. **Press the (MENU) key in LOCAL.**
2. **Press to select SETUP 1 to 4, and press the key.**
   - SETUP MENU will be displayed.
3. **Press to select “LOGICAL SEEK”, and press the key.**
4. **Press to select a set value, and press the key.**
   - **Set value:** HOST / ON / OFF
5. **Press the key several times to end the setting.**

---

### Setting of Drying Time

In the drying time setting, the following items for ink drying time are set.

- **SCAN**: Ink drying time for each scanning is set. (During bidirectional printing, the machine stops for a certain period of time specified for each of the outward and return scanning.)
- **PRINT END**: Ink drying time for after printing is set.

**Important!**
- When you give priority to the setting at the RasterLink side, make the setting value "Host".
- "SCAN" set in this machine is displayed as "Pause Time per Scan" in the RasterLink.
- You cannot specify the print end at the RasterLink side. When you set this machine to “Host", printing will be performed in “PRINT END= 0 sec.” status.

1. **Press the (MENU) key in LOCAL.**
2. **Press to select SETUP 1 to 4, and press the key.**
   - SETUP MENU will be displayed.
3. **Press to select “DRYING TIME”, and press the key.**
4. **Press the key.**
5. **Press to set drying time, and press the key.**
   - **Set the drying time for canning and after printing is completed. To enable the drying time specified in your RIP, select “Host”.**
   - **Scanning setting value:** Host or 0.0 sec. to 9.9 sec.
   - **Print end setting value:** Host or 0 sec. to 120 min.
   - **Item selecting:** by the \([\uparrow][\downarrow]\) keys
   - **Time setting:** by the \([\leftarrow][\rightarrow]\) keys
6. **Press the END POWER key several times to end the setting.**
**Setting of Left and Right Margins**

Set a non-printing area along the left and right edges of the media. The offset value against the standard margin 15mm is set hereupon.

- When you give priority to the setting at the RIP software side, make the setting value “Host”.
- You cannot specify the margins at the attached RIP software (RasterLink). When you use RasterLink, if you set this machine to “Host”, printing will be performed in “Margins for right and left off set value= 0 mm” status.
- The margin setting is reflected when the media width is detected.

1. Press the (MENU) key in LOCAL.
2. Press \[<,>\] to select SETUP 1 to 4, and press the (ENTER) key.
3. Press the (FUNC) (>>).
4. Press \[<,>\] to select “Margin/L” or “Margin/R”, and press the (ENTER) key.
5. Press \[<,>\] to select a set value, and press the (ENTER) key.
   - **Set value**: HOST / -10 to 85 mm
6. Press the (ENDPOWER) key several times to end the setting.

   **Caution**
   - Pay attention to that printing may start on the media press if a right and left margin is set to 5 mm or less when the media press is used in printing.

**Setting of Vacuum Fan**

Sets the absorbability of the media. By setting the absorption power to match the media, you can prevent print errors due to media rise-up.

1. Press the (MENU) (ENTER) key in LOCAL.
2. Press \[<,>\] to select SETUP 1 to 4, and press the (ENTER) key.
   - **SETUP MENU** will be displayed.
3. Press the (FUNC) (>>).
4. Press \[<,>\] to select “VACUUM FAN”, and press the (ENTER) key.
5. Press the (ENTER) key.
6. Press \[<,>\] to select a set value, and press the (ENTER) key.
   - **Set value**: HOST / WEAK / STANDARD / STRONG
7. Press the (ENDPOWER) key several times to end the setting.

**Setting of Feed Speed**

Changes the media feeding speed in printing.

1. Press the (MENU) (ENTER) key in LOCAL.
2. Press \[<,>\] to select SETUP 1 to 4, and press the (ENTER) key.
   - **SETUP MENU** will be displayed.
3. Press the (FUNC) (>>).
4. Press \[<,>\] to select “FEED SPEED”, and press the (ENTER) key.
5. Press the (ENTER) key.
6. Press \[<,>\] to select a set value, and press the (ENTER) key.
   - **Set value**: HOST / 10 to 200%
7. Press the (ENDPOWER) key several times to end the setting.

   **Caution**
   - Some settings do not change the speed depending on the print conditions.

**Setting of MAPS**

The MAPS (Mimaki Advanced PassSystem) function to disperse the pass boundary to make the feeding stripes less visible. With this function, the degree of application of MAPS can be changed.

- MAPS provides two setting options: “AUTO” and “MANUAL” MAPS applies the one most suitable for your printing conditions, so please normally use “AUTO” (default value).
- In order to use this function, Mimaki driver Ver 4.2.0 or higher is required.
- Changing the MAPS settings may change the color tone. Check the effects before use.
- MAPS may not be effective depending on image to be printed. Use it after checking effect in advance.
Setting Auto Cleaning

You can set the machine so that it counts the number of printed files or the length or time after printing has been completed, and performs cleaning automatically if required. You can select the auto cleaning setting from three types below:

• PAGE : Set the cleaning intervals by the number of printed files.
• LENGTH : Set the cleaning intervals by the printed length.
• TIME : Set the cleaning intervals by the printed time.

The machine can perform a stable printing operation with its heads always kept clean. Besides, automatic nozzle check after auto cleaning can be set. (Cleaning Check function)

The machine can perform a stable printing operation with its heads always kept clean.

1. Press the (MENU) key in LOCAL.
2. Press to select SETUP 1 to 4, and press the key.
   • SETUP MENU will be displayed.
3. Press the (>>) key.
4. Press to select “AUTO CLEANING”, and press the key.
5. Press the key, and press to select the type of auto cleaning.
   • There are “PAGE”, “LENGTH” and “TIME” for auto cleaning.
   • FILE: When the set number of prints has been completed, the machine performs head cleaning automatically.
   • LENGTH: When the set length has passed, the machine performs head cleaning automatically.
   • TIME: When the set time has passed, the machine performs head cleaning automatically.
   • If you do not set auto cleaning, first select “OFF” and proceed to the Step 7.
6. Press the key, and press to select the cleaning interval.
   • Depending on the auto cleaning type selected in the Step 3, the setting value differs.
   • For FILE : 1 to 1000 file
   • For LENGTH : 0.1 to 100.0m (in 0.1m increment)
   • For TIME : 10 to 120min (in 10min increment)
7. Press the key, and press to select the cleaning type.
   • Set Value : NORMAL/ SOFT/HARD
8. Press the key, and press to select “Cleaning Check”.
9. Press the key, and press to select set value.
   • Set Value : ON/ OFF
10. Press the key.
11. Press the END/POWER key several times to end the setting.
   • Depending on the state of the heads, etc., the image quality deterioration may not be improved even with this function performed. In this case, contact our service office or the distributor in your region.

Setting Interval Wiping

When the set time has passed, nozzle face of the head is cleaned automatically to remove ink droplets on the nozzle face.

In case that deflection, nozzle missing, or symptom which ink droplets fall down occurred, set the interval between each operation shorter.

1. Press the (MENU) key in LOCAL.
2. Press to select SETUP 1 to 4, and press the key.
   • SETUP MENU will be displayed.
3. Press the (<<) key.
4. Press to select “INTERVAL WIPING”, and press the key.
5. Press to set intervals.
   • Set Value : 3 to 255 Minutes, OFF
   • When [OFF] is set, periodical wiping is not executed.
6. Press the key.
7. Press the key several times to end the setting.
   • Depending on the state of the heads, etc., the image quality deterioration may not be improved even with this function performed. In this case, contact our service office or the distributor in your region.
About MACHINE SETUP MENU

Common settings are functions for using this machine easily. The following items can be set in Machine settings.

- Press this to select MACHINE SETUP MENU, or to switch to the previous screen.
- Press this to switch to the next screen.
- Use these to select a setting item.
- Press this to confirm a setting, etc.

### NETWORK (P.3-15)

- **Set the network.**
  - Check IP Addr.: The IP address currently used by this machine is displayed.
  - Check MAC Addr.: The IP address currently used by this machine is displayed.
  - DHCP: ON / OFF
    - When it is ON, the IP address given by the DHCP server is used.
  - AutoIP: ON / OFF
    - When it is ON, the IP address is determined by the AutoIP protocol. However, DHCP is ON, DHCP has priority.
  - IP Address *1: Set the IP address used by this machine.
  - Default Gateway *1: Set the default gateway used by this machine.
  - DNS Address *1: Set the DNS server address used by this machine.
  - SubNet Mask *1: Set the digit number of the subnet mask used by this machine.

### EVENT MAIL (P.3-16)

- **Mail Delivery:**
  - ON / OFF
    - Set whether you send/ do not send the e-mail when the set event occurs.

- **Select Event (P.3-17):**
  - Print Start Event: ON / OFF
    - Set whether you send/ do not send the e-mail at the start of printing.
  - Print End Event: ON / OFF
    - Set whether you send/ do not send the e-mail at the end of printing.
  - Error Event: ON / OFF
    - Set whether you send/ do not send the e-mail when a error occurs.
  - Warning Event: ON / OFF
    - Set whether you send/ do not send the e-mail when a warning occurs.
  - Other Event: ON / OFF
    - Set whether you send/ do not send the e-mail when an event other than the above occurs.

- **Mail Address:** Set the e-mail address to which you send the event mail. Alphanumeric characters and symbols (within 96 characters)
- **Message Subject:** Set the characters to write in the subject of the event mail. Alphanumeric characters and symbols (within 8 characters)
# Chapter 3 Machine setting

## Setting a AUTO Power-off

When no operation has been performed for the set time, the power supply is automatically turned "OFF".

1. **Press the** [FUNCTION (MENU)] [↑] [↓] (twice) [ENTER] **key in LOCAL.**
   - MACHINE SETUP MENU will be displayed.

2. **Press** [▲][▼] to select “AUTO POWER OFF”, and press the **ENTER** key.

3. **Press** [▲][▼] to select a set value, and press the **ENTER** key.
   - **Set Value** : none, 10 to 600min

4. **Press the** [ENDPOWER] **key several times to end the setting.**

## Setting Take-up unit

Set the operation method when press the ON / OFF button on the take-up unit.

Also, when the optional tension bar is installed, for setting whether the tension bar is used or not used.

1. **Press the** [FUNCTION (MENU)] [↑] [↓] (twice) [ENTER] **key in LOCAL.**
   - MACHINE SETUP MENU will be displayed.

2. **Press** [▲][▼] to select “TAKE-UP UNIT”, and press the **ENTER** key.

3. **Press** [▲][▼] to select “TAKE-UP UNIT”, and press the **ENTER** key.

4. **Press** [▲][▼] to select a set value, and press the **ENTER** key.
   - **Set Value** : ON/ OFF

5. **Press** [▲][▼] to select “TENSION BAR”, and press the **ENTER** key.

6. **Press** [▲][▼] to select a set value, and press the **ENTER** key.
   - **Set Value** : ON/ OFF

7. **Press** [▲][▼] to select “TAKE-UP SW”, and press the **ENTER** key.

---

### EVENT MAIL

**Server Setup** *(P. 3-18)*

- **SMTP Address**
  - Set the SMTP server.
- **SMTP Port No.**
  - Set the SMTP port number.
- **SENDER ADDRESS**
  - Set the e-mail address to be used as the sender mail address.
- **Authentication**
  - POP before SMTP
  - SMTP Authentication
  - OFF
  - Set the SMTP server authentication method (SMTP authentication).
- **User Name**
  - Set the user name used for the authentication.
- **Pass Word**
  - Set the password used for the authentication.
- **POP3 Address**
  - Set the POP server.
- **APOP**
  - Set ON/ OFF of APOP.

**Transmit Test** *(P.3-19)*

- Send the test e-mail.

### RESET *(P.3-20)*

- All setting values are returned to the status default.

---

*1. Settable when both of DHCP and AutoIP are [OFF]*

*2. Settable only when Auth. is not OFF*

*3. Settable only when Auth. is POP before SMTP*
Chapter 3 Machine setting

8 Press \( \text{[up/down]} \) to select a set value, and press the \( \text{[enter]} \) key.
- **Set Value**: Continuance/ Temporary
  - **Continuance**: Switching ON / OFF the winding operation when pressing the switch each time. (Take-up unit in operation does not stop until press again ON / OFF switch.)
  - **Temporary**: Do the winding operation only while holding down the switch. (When release the switch, winding operation is stopped.)

9 Press the \( \text{[end/pwr]} \) key several times to end the setting.

### Setting the Display of Media Residual

Whether the screen displays the remaining amount of a media is set.

<table>
<thead>
<tr>
<th>When the media remaining amount display is turned to “ON”</th>
<th>The remaining amount of a media is displayed in Remote. (However, when a leaf media is used, the length of the media to be printed is displayed.)</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the media remaining amount display is turned to “OFF”</td>
<td>The remaining amount of a media is not displayed in the Remote.</td>
</tr>
</tbody>
</table>

- The amount of a media that has been fed by the printing and jog keys is reflected in the remaining amount of a media.
- The length of a media (initial value of the remaining amount) is entered when a roll media is detected. (P.2-13)
- The setting configured here does not become effective unless media detection is performed after the setting has been complete.

1 Press the \( \text{[func][menu][up/down]} \) (twice) \( \text{[enter]} \) key in LOCAL.
  - MACHINE SETUP MENU will be displayed.

2 Press \( \text{[up/down]} \) to select “MEDIA REMAIN”, and press the \( \text{[enter]} \) key.

3 Press \( \text{[up/down]} \) to select ON/OFF.

4 Press the \( \text{[enter]} \) key.

5 Press the \( \text{[end/pwr]} \) key several times to end the setting.

### Setting the Display of Media Detection

Set the following two items in media detection settings.

<table>
<thead>
<tr>
<th>Setting of Media Detection</th>
<th>When loading the media, set whether to detect the media width automatically (AUTO) or decide the print (or cut) range manually (MANUAL).</th>
</tr>
</thead>
<tbody>
<tr>
<td>USE PR NUMBER QUERY</td>
<td>Set whether or not to enter the number of the pinch rollers you are using during media detection.</td>
</tr>
</tbody>
</table>

- When using the media that cannot be detected by the sensor, such as black cutting sheets, set the media detection setting to “MANUAL”.

1 Press the \( \text{[func][menu][up/down]} \) (twice) \( \text{[enter]} \) key in LOCAL.
  - MACHINE SETUP MENU will be displayed.

2 Press \( \text{[up/down]} \) to select “MEDIA DETECT”, and press the \( \text{[enter]} \) key.

3 Press \( \text{[up/down]} \) to select “MEDIA DETECT”, and press the \( \text{[enter]} \) key.

4 Press \( \text{[up/down]} \) to select AUTO/MANUAL.

5 Press the \( \text{[enter]} \) key.

6 Press \( \text{[up/down]} \) to select “USE PR NUMBER QUERY”, and press the \( \text{[enter]} \) key.

7 Press \( \text{[up/down]} \) to select ON/OFF.

8 Press the \( \text{[enter]} \) key.

9 Press the \( \text{[end/pwr]} \) key several times to end the setting.

- If you set the input of the number of pinch rollers “OFF” in step 6, the pinch roller pressure and the number of use, that has been set in RasterLink6, may not match in some cases. Set to “OFF” only when performing set of pinch roller pressure (P.2-13) in this machine.
Chapter 3 Machine setting

Setting a LANGUAGE
You can change the displayed language.

1. Press the (FUNC) (MENU) (twice) (ENTER key in LOCAL.
   • MACHINE SETUP MENU will be displayed.
2. Press the (FUNC) (>>) .
3. Press (▲)(▼) to select “LANGUAGE”, and press the (ENTER) key.
4. Press (▲)(▼) to select language, and press the (ENTER) key.
5. Press the (END/POWER) key several times to end the setting.

Setting Time
You can set time of your country (time difference).

1. Press the (FUNC) (MENU) (twice) (ENTER key in LOCAL.
   • MACHINE SETUP MENU will be displayed.
2. Press the (FUNC) (>>) .
3. Press (▲)(▼) to select “TIME”, and press the (ENTER) key.
4. Press (▲)(▼)(◄)(►) to enter time, and press the (ENTER) key.
   • Year/Month/Day/Time selecting: by the [◄][►] keys.
   • Year/Month/Day/Time inputting: by the [▲][▼] keys.
5. Press the (END/POWER) key several times to end the setting.

   • -20 hours to +4 hours can be set.

Setting Unit (Temperature/ Length)
Units used by this machine are set.

1. Press the (FUNC) (MENU) (twice) (ENTER key in LOCAL.
   • MACHINE SETUP MENU will be displayed.
2. Press the (FUNC) (>>) .
3. Press (▲)(▼) to select “UNIT/TEMP.” or “UNIT/LENGTH”, and press the (ENTER) key.
4. Press (▲)(▼) to select a set value, and press the (ENTER) key.
   • Set value of temperature: °C / °F
   • Set value of length: mm / inch
5. Press the (END/POWER) key several times to end the setting.

Setting a KEY BUZZER
You can turn off the buzzer sound when pressing the key.

1. Press the (FUNC) (MENU) (twice) (ENTER key in LOCAL.
   • MACHINE SETUP MENU will be displayed.
2. Press the (FUNC) (>>) .
3. Press (▲)(▼) to select “KEY BUZZER”, and press the (ENTER) key.
4. Press (▲)(▼) to select a set value, and press the (ENTER) key.
   • Set value: ON/ OFF
5. Press the (END/POWER) key several times to end the setting.

   • When the key buzzer is set to “OFF”, the buzzer sound for errors, warnings, operation completion, etc. cannot be shut off.
### Setting the CONFIRM. FEED
Set whether media feeding is performed for checking the result of the test printing etc. or not.

1. Press the **FUNCTION (MENU) »▼ (twice) ENTER** key in LOCAL.
   - MACHINE SETUP MENU will be displayed.
2. Press the **FUNCTION (<<)** key.
3. Press ▲▼ to select “CONFIRM. FEED”, and press the **ENTER** key.
4. Press ▲▼ to select a set value, and press the **ENTER** key.
   - **Set value:** ON/ OFF
5. Press the **ENDPOWER** key several times to end the setting.

### Setting the SPACE FEED MODE
Change the feed mode of the margin included in the image data (the space of no data to be printed). If print data with much margin, set to “CONTINUOUS”, then the print time can be shortened.

1. Press the **FUNCTION (MENU) »▼ (twice) ENTER** key in LOCAL.
   - MACHINE SETUP MENU will be displayed.
2. Press the **FUNCTION (<<)** key.
3. Press ▲▼ to select “SPACE FEED MODE”, and press the **ENTER** key.
4. Press ▲▼ to select a set value, and press the **ENTER** key.
   - **INTERMITTENT:** Perform intermittent feed operation of the path division unit
   - **CONTINUOUS:** Feed the no data part at a time
5. Press the **ENDPOWER** key several times to end the setting.

### Set the network

1. Press the **FUNCTION (MENU) »▼ (twice) ENTER** key in LOCAL.
   - MACHINE SETUP MENU will be displayed.
2. Press the **FUNCTION (<<)** key.
3. Press ▲▼ to select “NETWORK”, and press the **ENTER** key.
4. Press ▲▼ to select “CHECK IP ADDRESS”, and press the **ENTER** key.
   - The IP address currently used by this machine is displayed.
   - When you have finished the check, press the [ENTER] key.
   - After connecting with the network, it takes time until the IP address is determined. If the IP address has not been determined, “0.0.0.0” is displayed.
5. Press ▲▼ to select “CHECK MAC ADDRESS”, and press the **ENTER** key.
   - The MAC address currently used by this machine is displayed.
   - When you have finished the check, press the [ENTER] key.
6. Press ▲▼ to select “DHCP”, and press the **ENTER** key.
7. Press ▲▼ to select a set value, and press the **ENTER** key.
   - **Set value:** ON/ OFF
   - When it is ON, the IP address given by the DHCP server is used.
8. Press ▲▼ to select “AutoIP”, and press the **ENTER** key.
9. Press ▲▼ to select a set value, and press the **ENTER** key.
   - **Set value:** ON/ OFF
   - When it is ON, the IP address is determined by the AutoIP protocol. However, DHCP is ON, DHCP has priority.
10. Press ▲▼ to select “IP ADDRESS”, and press the **ENTER** key.
11. Press ▲▼ to select a set value, and press the **ENTER** key.
    - **Set value:** ON/ OFF
    - Both of DHCP and AutoIP is OFF, you can set IP Address. For other than above, proceed to the Step 14.
Chapter 3 Machine setting

**Setting event mail function**

Set the function to send e-mails to the set e-mail address when events such as cutting start/ end and stop due to an error.

- Disclaimer
  - The customer is responsible for the communication fee for Internet communication such as e-mail notification.
  - The notification by the event mail function may not be delivered due to Internet environment, failure of the device/ the power supply, etc. Mimaki has absolutely no responsibility for any damages or loss resulting from non-delivery or delays.

- Important
  - You can use event mail function by connecting LAN to this machine. Please prepare for LAN cable connection beforehand.
  - Not compatible with SSL communication.

---

1 Press the **FUNC** (MENU) **↓** **ENTER** (twice) key in LOCAL.

   • MACHINE SETUP MENU will be displayed.

2 Press the **FUNC** **<<**.

3 Press **▲ ▼** to select “EVENT MAIL”, and press the **ENTER** key.

4 Press **▲ ▼** to select “MAIL DELIVERY”, and press the **ENTER** key.

5 Press **▲ ▼** to select “ON”, and press the **ENTER** key.

6 Press the **END/POWER** key several times to end the setting.
Set the event to send an event mail

1. Press the \( \text{FUNC1} \) (MENU) \( \rightarrow \) \( \downarrow \) (twice) ENTER key in LOCAL.
   • MACHINE SETUP MENU will be displayed.

2. Press the \( \text{FUNC1} \) (<<).

3. Press \( \uparrow \) \( \downarrow \) to select “EVENT MAIL” , and press the \( \text{ENTER} \) key.

4. Press \( \uparrow \) \( \downarrow \) to select “SELECT EVENT” , and press the \( \text{ENTER} \) key.

5. Press \( \uparrow \) \( \downarrow \) to select the event, and press the \( \text{FUNC2} \) (\( \checkmark \)).
   • After selecting the event, press the [FUNC2] key and put a check in the check box. An email will be sent when the event whose box has been checked occurs.
   • To select multiple events, use \( \uparrow \) \( \downarrow \) to put the cursor over the events you want, and put a check in their boxes by pressing [FUNC2].

6. Press the \( \text{END/POWER} \) key several times to end the setting.

Set the e-mail address

1. Press the \( \text{FUNC1} \) (MENU) \( \rightarrow \) \( \downarrow \) (twice) ENTER key in LOCAL.
   • MACHINE SETUP MENU will be displayed.

2. Press the \( \text{FUNC1} \) (<<).

3. Press \( \uparrow \) \( \downarrow \) to select “EVENT MAIL” , and press the \( \text{ENTER} \) key.

4. Press \( \uparrow \) \( \downarrow \) to select “MAIL ADDRESS” , and press the \( \text{ENTER} \) key.

5. Press \( \uparrow \) \( \downarrow \) \( \leftarrow \) \( \rightarrow \) to set mail address, and press the \( \text{ENTER} \) key.
   • Set the e-mail address to which you send the event mail.
   • Set it with alphanumeric characters and symbols within 96 characters.

6. Press the \( \text{END/POWER} \) key several times to end the setting.

Set the subject

1. Press the \( \text{FUNC1} \) (MENU) \( \rightarrow \) \( \downarrow \) (twice) ENTER key in LOCAL.
   • MACHINE SETUP MENU will be displayed.

2. Press the \( \text{FUNC1} \) (<<).

3. Press \( \uparrow \) \( \downarrow \) to select “EVENT MAIL” , and press the \( \text{ENTER} \) key.

4. Press \( \uparrow \) \( \downarrow \) to select “MASSAGE SUBJECT” , and press the \( \text{ENTER} \) key.

5. Press \( \uparrow \) \( \downarrow \) \( \leftarrow \) \( \rightarrow \) to set subject, and press the \( \text{ENTER} \) key.
   • Set the characters to write in the subject of the event mail.
   • Set it with alphanumeric characters and symbols within 8 characters.

6. Press the \( \text{END/POWER} \) key several times to end the setting.

---

**Event name** | **Outline**
--- | ---
PRINT START | Sets sending/not sending of an email when printing starts.
PRINT END | Sets sending/not sending of an email when printing ends.
ERROR | Sets sending/not sending of an email when printing is stopped due to occurrence of an error.
WARNING | Sets sending/not sending of an email when a warning occurs during printing.
etc. | Sets sending/not sending of an email when an event other than the above occurs.
Set the server

1. Press the \( \text{FUNC} \) (MENU) \( \text{\downarrow} \) (twice) \( \text{\rightarrow} \) \( \text{\leftarrow} \) key in LOCAL.
   • MACHINE SETUP MENU will be displayed.

2. Press the \( \text{\downarrow} \) key.

3. Press \( \text{\uparrow} \) to select “EVENT MAIL”, and press the \( \text{\rightarrow} \) key.

4. Press \( \text{\uparrow} \) to select “SERVER SETUP”, and press the \( \text{\rightarrow} \) key.

5. Press \( \text{\uparrow} \) to select “SMTP ADDRESS”, and press the \( \text{\rightarrow} \) key.

6. Press \( \text{\uparrow} \) to set SMTP Address, and press the \( \text{\rightarrow} \) key.
   • Press the jog key \( \text{\uparrow} \) and \( \text{\downarrow} \) to set SMTP address.
   • Input the SMTP address name.

7. Press \( \text{\uparrow} \) to select “SMTP PORT No.”, and press the \( \text{\rightarrow} \) key.

8. Press \( \text{\uparrow} \) to set SMTP Port No., and press the \( \text{\rightarrow} \) key.
   • Set the SMTP port number.

9. Press \( \text{\uparrow} \) to select “SENDER ADDRESS”, and press the \( \text{\rightarrow} \) key.

10. Press \( \text{\uparrow} \) to set SENDER ADDRESS, and press the \( \text{\rightarrow} \) key.
    • Press \( \text{\uparrow} \) and \( \text{\downarrow} \) and set the e-mail address to use as the sender mail address.
    • Set it with alphanumeric characters and symbols within 64 characters.
    • Depending on your server, if you do not set the e-mail address not supporting the account, sending/receiving e-mails may be unavailable.

11. Press \( \text{\uparrow} \) to select “AUTHENTICATION”, and press the \( \text{\rightarrow} \) key.

12. Press \( \text{\uparrow} \) to set authentication method, and press the \( \text{\rightarrow} \) key.
    • Set the authentication method of the SMTP server.
    • When you select [OFF], proceed to the Step 20.

13. Press \( \text{\uparrow} \) to select “USER NAME”, and press the \( \text{\rightarrow} \) key.

14. Press \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\rightarrow} \) to set User Name, and press the \( \text{\rightarrow} \) key.
    • Press \( \text{\uparrow} \) and \( \text{\downarrow} \) to set the user name to use for the authentication.
    • Set it with alphanumeric characters and symbols within 30 characters.

15. Press \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) to select “PASSWORD”, and press the \( \text{\rightarrow} \) key.

16. Press \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\rightarrow} \) to set Pass Word, and press the \( \text{\rightarrow} \) key.
    • Press \( \text{\uparrow} \) and \( \text{\downarrow} \) to set the password to use for the authentication.
    • Set it with alphanumeric characters and symbols within 15 characters.
    • On the password setting screen, you can only check the value that you are currently inputting.
    • When you select [POP before SMTP] in the Step 11, set the items in the Step 16 to 19.

17. Press \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\rightarrow} \) to select “POP3 ADDRESS”, and press the \( \text{\rightarrow} \) key.

18. Press \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\rightarrow} \) to set POP3 Address, and press the \( \text{\rightarrow} \) key.
    • Press \( \text{\uparrow} \) and \( \text{\downarrow} \) to set POP server.
    • Input the POP server name.

19. Press \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\rightarrow} \) to select “APOP”, and press the \( \text{\rightarrow} \) key.

20. Press \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\uparrow} \) \( \text{\rightarrow} \) to set ON/ OFF, and press the \( \text{\rightarrow} \) key.

21. Press the \( \text{END/POWER} \) key several times to end the setting.
Send a test e-mail

1. Press the [SELECT] (MENU) ➤ (twice) ➤ [ENTER] key in LOCAL.
   • MACHINE SETUP MENU will be displayed.
2. Press the [SELECT] (<<) key.
3. Press ➤ to select “EVENT MAIL”, and press the [ENTER] key.
4. Press the [SELECT] (>>) ➤ [ENTER] key.
   • “TRANSMIT TEST” will be selected.

5. Press the [ENTER] key.
   • The sent result is displayed.
   • If sending test e-mail has failed, an error code is displayed.
   Refer to the next page to solve the problem.

6. Press the [END/POWER] key several times to end the setting.

• The sent result of the test e-mail is the result of e-mail sending process performed by this machine to the e-mail server. It does not indicate that the e-mail was received at the address.
• If the spam e-mail filter etc. has been set in the terminal in which e-mails are received, even if “Sending has been completed” is displayed, the e-mail cannot be received in some cases.
• If sending test e-mail has failed, the error code below is displayed.
• If the error cannot be solved, try again after a while.
• For the server setting etc., contact with the network administrator or the provider.

<table>

</table>

“***” is the error code returned from the e-mail server.
Chapter 3 Machine setting

Initializing the Settings

You can return the setting of “SETUP”, “MAINTENANCE” and “MACHINE SETUP” to the status before shipment.

1. Press the \(\text{FUNC}\) (MENU) \(\uparrow\downarrow\) (twice) \(\text{ENTER}\) key in LOCAL.
   • MACHINE SETUP MENU will be displayed.

2. Press the \(\text{FUNC}\) \(<\).  

3. Press \(\uparrow\downarrow\) to select “RESET”, and press the \(\text{ENTER}\) key.

4. Press the \(\text{ENTER}\) key.
   • The already configured settings are initialized.

5. Press the \(\text{END/POWER}\) key several times to end the setting.
About NOZZLE CHECK MENU

Set operations concerning the nozzle missing detection function.

---

**INFORMATION MENU table**

</tbody>
</table>

*1. When the set length is reached during printing, nozzle check is conducted at the start of the next printing.

*2. Depending on the print conditions, nozzle recovery is not applied in some cases. 

---
## Printing Check Flow

Nozzle check is conducted according to the following flow at the start of printing.

- Turn the “Printing Check” setting ON to be enabled.
- Perform RETRY COUNT and NOZZLE RECOVERY settings only when the settings are enabled.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>nozzle check → Judgment</td>
</tr>
<tr>
<td></td>
<td>Detects missing nozzles.</td>

<tr>
<td></td>
<td>• Turn the “NOZZLE RECOVERY” setting ON to be enabled.</td>
</tr>
<tr>
<td>5</td>
<td>Nozzle Missing judgment</td>
</tr>
<tr>
<td></td>
<td>If more missing nozzles than “Judgment Condition” are eventually detected, it is determined that printing can not be continued, and printing is stopped.</td>
</tr>
</tbody>
</table>

## Printing Operations at “Nozzle Missing” Judgment and Error Occurrence

- When judged to be “Nozzle Missing” → Printing is stopped.
- When error occurs during nozzle check → Printing is stopped and “Printing Check” is automatically turned OFF. After recovering from the error, set “Printing Check” once again.
Setting the Printing Check
Select ON when you want to conduct nozzle check at the start of online printing.

1 Press the (FUNC) (MENU) (3 times) (3 times) key in LOCAL.
   • NOZZLE CHECK MENU will be displayed.

2 Press to select “Printing Check”, and press the key.

3 Press to select ON, and press the key.
   • The “Check Interval” setting screen will be displayed.
   • “Select OFF to not set nozzle check. Proceed to step 11.”

4 Press the key.

5 Press to select setting item, and press the key.
   • select the nozzle check interval from “LENGTH” or “FILE”.
     LENGTH: nozzle check is conducted when the printed length reaches the set length.
     FILE: nozzle check is conducted when the number of printed files reaches the set number.

6 Press to select setting value, and press the key.
   • The set value will differ according to the setting selected in Step 5.
     LENGTH: 0.1 to 100 m
     FILE: 1 to 300 files

7 Press the key twice.
   • The “Action” setting screen will be displayed.

8 Press the key.
   • “CLEANING TYPE” will be selected.

9 Press to select cleaning type, and press the key.
   Setting value: OFF/SOFT/ NORMAL/ HARD

10 Press to select retry count, and press the key.
   Setting value: 0 to 3

11 Press the END/POWER key several times to end the setting.

Setting the NOZZLE RECOVERY
set this if you want to conduct automatic nozzle recovery when nozzle missing is detected.

1 Press the (FUNC) (MENU) (3 times) (3 times) key in LOCAL.
   • NOZZLE CHECK MENU will be displayed.

2 Press to select “NOZZLE RECOVERY”, and press the key.

3 Press to select ON/OFF, and press the key.

4 Press the END/POWER key several times to end the setting.

Setting the Judgement Condition
Set the conditions for judging nozzle missing.

1 Press the (FUNC) (MENU) (3 times) (3 times) key in LOCAL.
   • NOZZLE CHECK MENU will be displayed.

2 Press to select “Judgement Condition”, and press the key.

3 Press to select color, and press the key.

4 Press to set the number of nozzles for judgment, and press the key.

5 Press the END/POWER key several times to end the setting.

• The type of color changes depending on the ink set.
About INFORMATION MENU

The information of this machine can be confirmed.
The following items can be confirmed as machine information.

- Press this to select INFORMATION MENU, or to switch to the previous screen.
- Press this to switch to the next screen.
- Use these to select a setting item.
- Press this to confirm a setting, etc..
INFORMATION MENU table

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>

<tr>
<td>Ink REPL. Report</td>
<td>This prints ink history of this machine.</td>
</tr>
<tr>
<td>ERROR HISTORY</td>
<td>This displays the history of errors and warnings to date.</td>
</tr>
<tr>
<td></td>
<td>When you press [▲][▼], the date of occurrence (year/month/day/hour/minute) and the error/warning information are displayed alternately in the order of occurrence.</td>
</tr>
</tbody>
</table>

Displaying the Information

1. Press the (FUNC (MENU) ▲▼ (4 times) ENTER key in LOCAL.
   - INFORMATION MENU will be displayed.

2. Press ▲▼ to select a information.
   - Refer to the “INFORMATION MENU”, and select the information to be displayed.

3. Press the ENTER key.
   - If you selected [LIST] in step 2, the machine’s settings will be printed.

4. Press the END/POWER key several times to end the setting.
   - When you reset the used count of the wiper, press the [FUNC2] key while [RESET?] is displayed. When you press the [ENTER] key, the number of wipings is reset.
   - By pressing the function key during display of “WIPING information,” “WASTE TANK information” and “Spout Rubber” in USAGE, the used counts can be reset.

   **When resetting WIPING information:** Press the [FUNC2]
   **When resetting WASTE TANK information:** Press the [FUNC1]
   **When resetting Spout Rubber:** Press the [FUNC3]
This chapter describes about cutting function.
Cut Out Data with Registration Mark

Create registration marks on an output image that you want to make a seal, and the machine detects them to cut it out. There are following two types of registration marks.

Registration mark: Type 1

- Use the TP4 when performing trapezium compensation to correct the uneven sheet feeding rate caused by the difference in the diameter between the right and left grit rollers. If the trapezium compensation is to be omitted, there is no need to set the TP4. In that case, however, cutting distortion will increase.

Registration mark: Type 2

• Use the TP4 when performing trapezium compensation to correct the uneven sheet feeding rate caused by the difference in the diameter between the right and left grit rollers. If the trapezium compensation is to be omitted, there is no need to set the TP4. In that case, however, cutting distortion will increase.

The Flow of Cutting out the Registered Data

1. Add registration marks on the image that you want to make a seal and others, and print it on a sheet.
2. Set the printed sheet in CJV150 series.
3. Send the cut-target image from the computer for cutting.

Set it referring to P.2-4.

There are some conditions for creating the registration marks. See pages P.4-2 through P.4-5.

In case it is not successfully cut,
• Confirm the reaction of registration mark sensor.
• Confirm the position of the Light Pointer.

Precautions in inputting data with registration marks

There are some limitations on preparing data with registration marks. In order to make full use of this function, read the following instructions carefully and prepare data with registration marks properly.

- The registration mark described here is intended to detect the sheet inclination and the lengths along the X and Y axes. It is not a mark for trimming.

Size of the registration marks

The registration mark length shall be about more than ten times the line width. In addition, for the length of a side of the registration mark against the data, refer to "The size of, and the distance between, registration marks" (P.4-4).

Enter the registration mark detection mode

1. Press the FUNC (TEST CUT) in LOCAL.
2. Press 
   to select the “MARK DETECTION”, and press the ENTER key.

- It turns out to be a registration mark detection mode.
- When the registration detection is set to OFF, it doesn’t enter into the registration mode. (P.4-6)
- While various functions are under setting, data entry may be cancelled and the machine may go back to the previous setting item.
The area where registration marks and designs can be arranged

- The TP1 starting position must be 20 mm or more away from the leading edge of the sheet.
- The TP2 end position must be 45 mm or more away from the tail end of the sheet.

Mark Form: Type 1

Mark Form: Type 2

No-plotting area around the registration marks

An area around a registration mark (from the mark origin to the mark size area) is a non-plotting area. There must be no data plotted or stain in this area; otherwise, a wrong origin may be detected or a mark read error can occur.

- If a wrong mark origin is detected, the cutting will be performed in a wrong area.

Available cutting area

- A: Between 50 to 3000 mm
- B: 50 mm or more

Mark size

Mark Origin

No-plotting area
Example of cause of wrong detection 1
There is a line outside the registration marks

Example of cause of wrong detection 2
The distance between registration marks (TP2 and TP1 or TP4 and TP2) is smaller than the mark length (for Type 2)

The size of, and the distance between, registration marks
The size (Y) of a registration mark suited for the distance (X) between the marks is as shown below. If the mark size (Y) is too small relative to the distance (X), the marks may not be detected correctly. Be sure to prepare the registration marks with an appropriate size.

<table>
<thead>
<tr>
<th>X</th>
<th>200 max.</th>
<th>500 max.</th>
<th>1000 max.</th>
<th>2000 max.</th>
<th>2001 min</th>
</tr>
</thead>
<tbody>
<tr>
<td>B</td>
<td>5 to 40</td>
<td>8 to 40</td>
<td>15 to 40</td>
<td>25 to 40</td>
<td>35 to 40</td>
</tr>
</tbody>
</table>

Distance between registration marks for copied designs
For Type 1 registration marks, the distance between the marks must be not shorter than two times the mark length and not longer than 1000 mm. For Type 2 registration marks, the distance between the marks must be not shorter than the mark length and not longer than 1000 mm.

Recommended size of the area defined with a set of four registration marks
It is recommended that the size of the area defined with a set of four registration marks is in the range of A4 size (210 mm x 297 mm) to A3 size (297 mm x 420 mm). If you follow this recommendation, you can minimize wasteful spaces and arrange the designs efficiently.
In case of perform printing a registration mark continuously

When perform printing a registration mark continuously, set the one side of the registration mark size to 8mm. In case 8mm or shorter registration mark recognized continuously, may cause the glitches on the main unit.

Color of mark

The mark must be printed in black against the white background.
The registration mark will not be detected correctly if the background is not white or the mark is not black.

Mark blurred

If the mark is blurred, a wrong mark origin can be detected, thus resulting in deviated cutting.

Notes for the combined operation of print & cut

When performing combined operation of print & cut with RasterLink 6 or later, be careful to the following items:

(1) When performing combined operation of print & cut with the attached application software to this machine (RasterLink 6 Ver.3.0 or later / FineCut 8.4.1 or later), the following set contents will follow the instruction of software side. Note that the contents set in this machine will be invalid.

- Register mark size
- Register mark shape

(2) The combined operation of print & cut without a register mark is not performed under the following conditions:

- Print & cut using the take-up device

**Caution**

- Other than the above conditions, there is a possibility of the cutting line being misaligned depending on the printing data size. Therefore, it is also recommended to perform the operation with the data which has register marks for combined operation of print & cut.
Setting of Detecting the Registration Marks

When you want to cut the data with registration marks, you must set the following without fail.

1. Press the \text{FUNC1} (MENU) \rightarrow \text{FUNC3} (\gg) \rightarrow \text{ENTER} key in LOCAL.
   • Cutting MENU will be displayed.

2. Press \text{A} \text{V} to select the “MARK DETECT”, and press the \text{ENTER} key.

3. Press \text{A} \text{V} to select the setting item, and press the \text{ENTER} key.
   • Refer to “The setting items of detecting the registration marks” (P.4-6).

4. Press \text{A} \text{V} to select the setting value, and press the \text{ENTER} key.
   • Set value: Standard, high speed, High quality

5. Press the \text{END/POWER} key several times to end the setting.

   • You can set the register mark detection without pressing [FUNC1] (MENU) from LOCAL.
     (1) Press the \text{SEL} key in LOCAL to display "TEST CUT".
     (2) Press [FUNC2] (TEST CUT)
     (3) Press the [ENTER] key
       • After this, go to step 3 of “Setting of Detecting the Registration Marks”.

The setting items of detecting the registration marks

There are the following seven setting items for registration mark detection.

(1) MARK DETECT

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON/OFF</td>
<td>The registration marks can be detected if this is set to ON.</td>
</tr>
</tbody>
</table>

(2) MARK TYPE

Select either one of the following types of registration marks.

- Use the copy function of cutting software, in the case of continuous cut, select the register mark of Zero margin, and you will be able to place no margin between the register marks.

By eliminating the margin between the register marks to cut efficiently, recommend to use register mark shaped “Zero Margin”.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
</table>
| Type 1  | \begin{tabular}{c}
\begin{tabular}{c}
TP4
\end{tabular} \\
TP3 \\

\end{tabular} |

(3) MARK SIZE

Set the length of one side of the registration mark.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 to 40mm</td>
<td>When the printed mark’s horizontal and vertical lengths differ from each other, set the same value as the shorter length.</td>
</tr>
</tbody>
</table>
(4) OFFSET Y / OFFSET X
Generally the origin will be set at the position shown below. However, depending on your application and the work to be cut, the cutting position may be misaligned to the same direction. In this case, the location of the origin can be corrected.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>± 15.00mm</td>
<td>Use this to shift the origin position in the X direction or Y direction.</td>
</tr>
</tbody>
</table>

* If the origin is located out of the available cutting area, "ERR37 MARK ORG" will be displayed. In this case, write the registration marks in the area closer to the center of the media.

(5) DETECT END KEY START

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON/OFF</td>
<td>If this is ON, you will be able to detect crop mark in [END] key.</td>
</tr>
</tbody>
</table>

* If this is set to ON, the registration mark detection operation may be started by turning the power OFF.

(6) SENSOR LEVEL

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 to 7</td>
<td>The bigger the numerical value is, the higher the sensitivity of the registration mark sensor becomes. If it detects the registration mark by mistake, lower the sensitivity. Generally, use it with the setting value of &quot;4&quot;.</td>
</tr>
</tbody>
</table>

(7) MARK FILL UP

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON/OFF</td>
<td>Specify the setting as &quot;ON&quot; when using the &quot;Fill around the register mark&quot; function of FineCut to detect the printed registration mark. Create using a registration mark size of 10 mm or more when filling in around the registration mark.</td>
</tr>
</tbody>
</table>

About CUTTING MENU

- Press this to select SETUP MENU, or to switch to the previous screen.
- Press this to switch to the next screen.
- Use these to select a setting item.
- Press this to confirm a setting, etc..

◆ Cutting MENUs at-a-glance
### Cutting MENU table

- For each setting item below, you can set it so that the machine may operate according to the value specified when you printed from your RIP software in the connected host PC.
- **Set Item**: DRYING TIME/ MARGIN (LEFT and RIGHT)/ VACUUM FAN/ FEED SPEED
- When you operate the machine according to the contents specified with the RIP software, set each item to “Host” when registering this machine type. When you set it other than “Host”, the machine operates according to the machine setting.
- For the specifying method with the RIP software, refer to the operation manual of the RIP software.

</tr>
</tbody>
</table>
Setting the CUT MODE

This is to set the cutting quality.
There are the following three type for cut mode.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard</td>
<td>This is a regular cutting mode.</td>
</tr>
<tr>
<td>High speed</td>
<td>This is used to perform cutting in a short time (it is not appropriate for the heavy media).</td>
</tr>
<tr>
<td>High quality</td>
<td>This is a cutting mode used to give priority to cutting quality.</td>
</tr>
</tbody>
</table>

- Select “QUALITY” in any of the following cases:
  - Characters whose sizes are 10 mm or less are to be cut
  - Picture patterns or characters that have many sharp corners are to be cut
  - Minute cutting is to be performed
  However, the edges of finished patterns may be rugged if the data sent from the host computer is too complicated. In such a case, select “HIGH spd” for smooth finish.

- With “QUALITY”, the cutting speed is limited to 20 cm/s.

Important!

1. Press the (MENU) (FUNC) (FUNC3) key in LOCAL.
   - Cutting MENU will be displayed.

2. Press [ ] to select the “CUT MODE”, and press the [ENTER] key.

3. Press [ ] to select the setting value, and press the [ENTER] key.
   - Set value: Standard, high speed, High quality

4. Press the (POWER) key several times to end the setting.

Perform multiple Cuttings (Copy function)

This function performs cutting for the received data on two or more sheets. (Maximum 999 cuttings)

- You can perform multiple cuttings by specifying data saved in the receiving buffer of this machine.
- The receiving buffer can save only one data.
- When a new data is received, the data that has been saved is overwritten by it.
  (You cannot perform multiple cuttings by specifying the data that was received before.)

Important!

1. Press the (MENU) (FUNC) (FUNC3) key in LOCAL.
   - Cutting MENU will be displayed.

2. Press [ ] to select the “COPY”, and press the [ENTER] key.

3. Press [ ] to select the number of cutting (1 to 999), and press the [ENTER] key.

4. Press [ ] to select the interval of figures to be cut (0 to 30mm), and press the [ENTER] key.

Important!

- If the multiple sheet cutting is executed immediately after cutting in the remote mode, cutting (plotting) will be overlapped. To avoid this trouble, be sure to set the new origin.
- While the machine is executing the multiple sheet cutting, it ignores data sent from the computer.
- To send two or more pieces of data from the computer to the machine, the data has to be sent while providing an interval of 5 seconds or more between any two pieces of data. If two pieces of data are sent from the computer to the machine within 5 seconds, the two pieces of data will be subjected to the multiple sheet cutting. The machine performs cutting for divided cutting data by the specified number of sheets without dividing the data. If any error is displayed, refer to “Error messages” (P.6-8).
- When you use FineCut, the default value of Origin Renewal is “ON”. If you perform [No. COPIES], uncheck the checkbox. (Refer to FineCut OPERATION MANUAL Chapter5 “Setting Head Position after Plotting”)
- This function does not support on the cutting on RasterLink.
SETUP SUB MENU

The SETUP SUB MENU offer convenient functions that you can use in cutting. The following items are available in the sub menus.

<table>
<thead>
<tr>
<th>Function name</th>
<th>Outline</th>
</tr>
</thead>
<tbody>
<tr>
<td>DIVISION CUT</td>
<td>You can cut the data bigger than the sheet width by dividing it. With division cut, you can make settings for the width direction (Y) and feed direction (X).</td>
</tr>
<tr>
<td>UP SPEED</td>
<td>This is to set the speed of sheet and carriage movement when the tool is up. Setting the speed lower makes the sheet misalignment reduced at the time of long sheet feeding.</td>
</tr>
<tr>
<td>DUMMY CUT</td>
<td>You can make the blade edge is made to turn to a specific direction before starting cutting, which allows dummy cutting.</td>
</tr>
<tr>
<td>SHEET TYPE</td>
<td>Set this according to the weight of the media you have set. When this is set to &quot;HEAVY&quot;, the maximum cutting speed is set low.</td>
</tr>
<tr>
<td>ADJ PRS OFFSET</td>
<td>This is used to expand the value in such a case as when the beginning and end part of the cut are left cut.</td>
</tr>
<tr>
<td>OVER CUT</td>
<td>By over lapping the start point and the end point arbitrarily, you can make the media without uncut area.</td>
</tr>
<tr>
<td>CURVE MODE</td>
<td>Set the cutting speed of the curve part. When the curve part is distorted with cutting a relatively large circular arc, setting to &quot;SLOW&quot; may improve the situation.</td>
</tr>
<tr>
<td>SETUP RESET</td>
<td>Reset the setting values to the initial state.</td>
</tr>
<tr>
<td>Vacuum fan</td>
<td>Set the strength of the vacuum fan at cutting. Please use &quot;weak&quot; normally.</td>
</tr>
</tbody>
</table>

Setting the DIVISION CUT

When you set DIVISION CUT for the width direction (Y), you can cut the data bigger than the media width by dividing it. In addition, when you set DIVISION CUT for the feeding direction (X), you can cut the long data by dividing it and you can prevent cutting misalignment due to media meandering.

With the DIVISION CUT function, you can use the following convenient functions too.
- Perform a frame cut: Together with the cut data, the machine automatically cuts out the frame fitted to the size of the cut data.
- Put a mark for leaving a margin for gluing: You can put a "mark" for showing the point for gluing together the DIVISION CUT medias.

Set the Y direction (width direction) DIVISION CUT

1. Press the (MENU) (FUNC3) (>>) (ENTER) key in LOCAL.
   - Cutting MENU will be displayed.
2. Press (FUNC3) (>>).
3. Press (▲▲) to select the “SETUP SUB MENU”, and press the (ENTER) key.
4. Press (▲▲) to select the “DIVISION CUT”, and press the (ENTER) key.
5. Press (▲▲) to select “Y”, and press the (ENTER) key.
   - If you select “OFF”, setting for division cutting will not be carried out. Proceed to step 9.
6. Press (▲▲) to select “FRAME CUT”, and press the (ENTER) key.
7. Press (▲▲) to select a set value, and press the (ENTER) key.
   - Set value: ON, OFF
   - Select “ON” for the frame cut.
8. Press (▲▲) to select “MARK CUT”, and press the (ENTER) key.
9. Press (▲▲) to select a set value, and press the (ENTER) key.
   - Set value: ON, OFF
   - Select “ON” for the mark cut.
10. Press the (END/POWER) key several times to end the setting.
Set the X direction (feeding direction) 
DIVISION CUT

If the data size of the feeding direction exceeds the 
division length and cross cut length, the machine cuts it at 
that position by dividing it. 
If the cross cut length is set, the machine cuts by 
overlapping it by the set value.

1 Press the (FUNCTION) (FUNCTION) (ENTER) key in LOCAL.  
   • Cutting MENU will be displayed.
2 Press (FUNCTION) (ENTER) .
3 Press to select the “SETUP SUB MENU”, and press the (ENTER) key.
4 Press to select the “DIVISION CUT”, and press the (ENTER) key.
5 Press to select “X”, and press the (ENTER) key.  
   • If you select “OFF”, setting for division cutting will  
     not be carried out. Proceed to step 10.
6 Press to select “DIV. LENG”, and press the (ENTER) key.
7 Press to select a set value, and press the (ENTER) key.  
   • Set value : 50cm to 500 cm (in increments of 50cm)  
   • When it exceeds the set value, the machine cuts it  
     at that position by dividing it.
8 Press to select the “CROSS CUT”, and press the (ENTER) key.
9 Press to select a set value, and press the (ENTER) key.  
   • Set value : 0mm to 50mm (in increments of 1mm)  
   • The machine cuts by overlapping it by the set  
     value.
10 Press the (END/POWER) key several times to  
     end the setting.

Reset the setting for DIVISION CUT

1 Press the (FUNCTION) (FUNCTION) (ENTER) key in LOCAL.  
   • Cutting MENU will be displayed.
2 Press (FUNCTION) (ENTER) .
3 Press to select the “SETUP SUB MENU”, and press the (ENTER) key.
4 Press to select the “DIVISION CUT”, and press the (ENTER) key.
5 Press to select “Setting”, and press the (ENTER) key.
6 Press to select “OFF”, and press the (ENTER) key.
7 Press the (END/POWER) key several times to end the setting.

Important:

• The setting values are kept in memory even when  
  the power is turned off.
• During execution of division cutting, the machine  
  ignores any other data sent from the host  
  computer.
• In any of the following cases, the machine cannot  
  perform division cutting.  
  The data size is larger than the receiver buffer  
  capacity.  
  An origin change command is contained in the  
  cutting data.  
  A two-point compensation value has been set.  
  The registration mark detection is being  
  performed.  
  The machine cuts the test data stored in it.
Make the media without uncut area (OVER CUT function)

By overlapping the start point and the end point arbitrarily, you can make the media without uncut area. Specify the OVER CUT function (valid/invalid) and the length of the OVER CUT. If the length of the OVER CUT is set, when cut starts, cut will be performed from the position to the front by the specified length and the tool will move up going too far at the end. Additionally, you can enable the corner cut function to perform overcutting of corners other than the start and end points.

Important
- Setting proper OVER CUT can reduce uncut area of start and end point of a media easy to bend. If too large value is set, the result may have a rupture.

1. Press the (MENU) (>>) key in LOCAL.  
   - Cutting MENU will be displayed.

2. Press (FUNC3) (>>).

3. Press ( ) to select the “SETUP SUB MENU”, and press the (ENTER) key.

4. Press ( ) to select the “OVER CUT”, and press the (ENTER) key.

5. Press ( ) to select the set value, and press the (ENTER) key.

   - Set value: OFF/0.1 to 1.0m (in 0.1mm increment)
   - When you press the [ENTER] key, the setting for “CORNER CUT” setting will be displayed.

6. Press ( ) to select ON/OFF, and press the (ENTER) key.

7. Press the (END/POWER) key several times to end the setting.

Other SETUP SUB MENU

How to set other convenient functions is explained below. Change the settings according to the types of use.

1. Press the (MENU) (>>) key in LOCAL.  
   - Cutting MENU will be displayed.

2. Press (FUNC3) (>>).

3. Press ( ) to select the “SETUP SUB MENU”, and press the (ENTER) key.

4. Press ( ) several times, and select an item to set.

   • See “List of Settings” to select one.

   • The set value is retained even when the power is turned “OFF”.

List of Settings

The setting is as follows when purchasing:

<table>
<thead>
<tr>
<th>Function Name</th>
<th>Overview</th>
<th>Set Value*1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Setting the UP SPEED</td>
<td>This is to set the speed of sheet and carriage movement when the tool is up. Setting the speed lower makes the sheet misalignment reduced at the time of long sheet feeding.</td>
<td>5,10,20,30, AUTO (cm/s)</td>
</tr>
<tr>
<td>Setting the DUMMY CUT</td>
<td>the operation of dummy cutting is set.</td>
<td>OFF / ON</td>
</tr>
<tr>
<td>Setting the SHEET TYPE</td>
<td>This is to set the types of sheet according to the sheet you use.</td>
<td>Standard / Heavy</td>
</tr>
<tr>
<td>Setting the ADJ-PRS OFFSET</td>
<td>When there is part of a media left uncut at the starting and ending points, the value is increased.</td>
<td>0 to 2 to 7</td>
</tr>
<tr>
<td>Setting the CURVE MODE</td>
<td>When the curve part is distorted with cutting a relatively large circular arc with a long line segment, set to “SLOW”. Distortion may improve.</td>
<td>FAST / SLOW</td>
</tr>
</tbody>
</table>

*1 The underlined value is set at the time of purchase.
*2 If you set “Heavy” for the media setting, the cutting speed will be limited to 20 cm/s.
Setting the DUMMY CUT

This is performed after detecting the media or when changing the tool type in front of the pinch roller which is near the both ends from the position of the cutter unit is placed presently. Set the dummy cutting function to OFF when you do not want to damage the media in cutting cut-out characters.

- When "PEN" is selected for the tool condition, the dummy cutting cannot be set.
- The default of the dummy cutting function is ON. When you have set the dummy cutting function to OFF, perform test cutting (P.2-28) to adjust the cutter blade orientation before cutting.

Setting the ADJ-PRS OFFSET

Some part of a media is left uncut because the pressure applied when the cutter blade touches the media is weak. When an optional eccentric blade is used, some part of a media to be cut with the blade's angle being 120 degrees or less may be left uncut.

This is because the corners are cut with a low pressure (about 5 g) automatically applied so that the media does not turn up. Some part of a media may be left uncut because the blade edge does not rotate smoothly in its moving direction with the cutting pressure being low. In such a case, configure the setting for the pressure to be increased when the corners are cut.

Setting the CURVE MODE

When the curve part is distorted with cutting a relatively large circular arc with a long line segment, set to "SLOW". Distortion may improve.

- Set value: FAST / SLOW

When the angle of circular arc data is 0.3 degrees or less

FAST: Cut on lines A to C.
SLOW: Cut by the line A to B to C.

- It is set to "FAST" originally. When set to "SLOW", overall the speed will be slowed with general cut data.

SETUP RESET

Reset the setting values to the initial state.

1 Press the (MENU) (FUNC1) (FUNC2) (FUNC3) (ENTER) key in LOCAL.
   • Cutting MENU will be displayed.

2 Press (FUNC3) (ENTER) key.

3 Press (▲) (▼) to select the “SETUP SUB MENU”, and press the (ENTER) key.

4 Press (▼) several times, and select an item to set.
   • See "List of Settings" to select one.

5 Press (ENTER) and press the (▼) twice.
   • "SETUP RESET" will be selected.

6 Press the (ENTER) key.
   • The already configured settings are initialized.

7 Press the (END/POWER) key several times to end the setting.
Maintenance Function

This section gathers together the functions for checking/adjusting the cutting accuracy when cutting does not go normally.

<table>
<thead>
<tr>
<th>Function name</th>
<th>Outline</th>
</tr>
</thead>
<tbody>
<tr>
<td>MARK sensor (P.4-15)</td>
<td>Adjusting the registration mark sensor.</td>
</tr>
<tr>
<td>SAMPLE CUT (P.4-17)</td>
<td>In case that normal hanaokadata cutting cannot be performed etc., perform cutting with the sample stored in this machine to find out the cause of cutting error.</td>
</tr>
<tr>
<td>AUTO MEDIA CUT (P.4-17)</td>
<td>You can cut a medium into multiple pieces with a certain length.</td>
</tr>
<tr>
<td>PC ORIGIN OFFSET (P.4-18)</td>
<td>Adjust the misalignment between the print origin and the cutting origin.</td>
</tr>
<tr>
<td>SCALE ADJUST (P.4-19)</td>
<td>When printing and cutting without registration marks, adjustment is performed if the misalignment in the scanning direction occurs between the left and right edges of the media.</td>
</tr>
</tbody>
</table>

Maintenance of Mark Sensor

If cutting does not go normally, check the items below. In registration mark sensor maintenance, you can carry out maintenance of the following items.

<table>
<thead>
<tr>
<th>Item</th>
<th>Outline</th>
</tr>
</thead>
<tbody>
<tr>
<td>SENSOR CHECK (P.4-15)</td>
<td>checking the sensor for the register mark detection.</td>
</tr>
<tr>
<td>POINTER OFFSET (P.4-16)</td>
<td>If the cutter unit fails to recognize any register mark properly, the possible cause is an error in the positional relationship between the mark sensor and the light pointer. In this case, correct the position of the light pointer.</td>
</tr>
</tbody>
</table>

Check the sensor for the registration mark detection

Prepare the media on which the registration mark is printed.

- If you move the head and sheet manually, you cannot perform the right response check. Be sure to perform it via the following operations.
- For conditions of already printed registration mark, refer to “Precautions in inputting data with registration marks” (P.4-2).
- The setting values are kept in memory even when the power is turned off.
- The settings performed here for shape of the registration mark and length of the registration mark are reflected in the settings of “MARK DETECT” (P.4-6).
- The detection speed selected here will be used in the registration mark detection operations that are executed from here on.
- The pointer offset value selected by this operation is not initialized by SETUP RESET operation.

1. Press \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) in Local. • Enter the jog mode

2. Press \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) to move the tip of the pen to the registration mark detection position • Perform registration mark detection at a position 1mm or more away from the registration mark.

3. Press the \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) key to terminate the jog mode. • The machine returns to the Local.

4. Press the \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) key. • Cutting MENU will be displayed.

5. Press \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) \( \text{\textsuperscript{f}u} \) key.

6. Press \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) to select the “MAINTENANCE”, and press the \( \text{\textsuperscript{e}n} \) key.

7. Press \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) to select “MARK SENSOR”, and press the \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) key.

8. Press \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) \( \text{\textsuperscript{a}a} \) to select “SENSOR CHECK”, and press the \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) key.

9. Select the length of the registration mark and shape of the registration mark detection. • For details on setting the [SIZE] and [FORM], refer to the “Setting of Detecting the Registration Marks” (P.4-6).

10. Press the \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) \( \text{\textsuperscript{e}n} \) to perform registration mark detection. \( \text{\textsuperscript{f}u} \) “Detect operation”
Chapter 4 Cutting Funcion

Detect operation

1. **Scan in the X direction (plus direction) to detect the line.**
   - The buzzer sounds when the line is detected. If the line is not detected, the buzzer does not sound.

2. **Scan in the X direction (minus direction) to detect the line.**

3. **Scan in the Y direction (plus direction) to detect the line.**

4. **Scan in the Y direction (minus direction) to detect the line.**

5. **Follow the Steps 1 to 4, and confirm if the buzzer sounds 4 times.**
   - When the detection behavior completes successfully, the buzzer sounds 4 times.
   - If the buzzer does not sound, contact our sales office after checking the registration mark condition.

Correct the light pointer position

If the machine fails to recognize any registration mark properly, the possible cause is an error in the positional relationship between the MARK sensor and the light pointer.

In this case, adjust the position of the light pointer.

1. **Install a cutter in the tool holder.**

2. **Load the copy paper.**

3. **Press the **FUNC1** (MENU) ➤ **FUNC3** (>>) ➤ **ENTER** key in LOCAL.**
   - Cutting MENU will be displayed.

4. **Press **FUNC3** (>>) .**

5. **Press **Cursor Up** to select the “MAINTENANCE”, and press the **ENTER** key.**

6. **Press **Cursor Down** twice to select “MARK SENSOR”, and press the **ENTER** key.**

7. **Press **Cursor Down** to select “POINTER OFS”.**

8. **Press the **ENTER** key.**
   - A 10 mm by 10 mm cross pattern will be cutted.
   - The light pointer turns on and moves to the center of the cross pattern.

9. **Press **Cursor Up** ➤ **Cursor Right** ➤ **Cursor Down** ➤ **Cursor Right** to adjust the light pointer position so that the center of the light pointer is in alignment with the center of the cross pattern.

10. **Press the **ENTER** key.**
    - The machine will return to the local after registering the compensation value.
    - The value registered in the [POINTER OFS] is not initialized even by executing the “SETUP RESET”. (P.4-14)
Perform SAMPLE CUT to Find out the Cause of Cutting Error.

In case that normal data cutting cannot be performed etc., perform cutting with the sample stored in this machine to find out the cause of cutting error.

Sample “Cut”

Cut

Sample “Logo”

Important

• Execution of SAMPLE CUT will clear the data in the receiver buffer.

1 Press the [FUNC] (MENU) [FUNC3] (>>) key in LOCAL.

• Cutting MENU will be displayed.

Press [FUNC3] (>>) .

2 Press [FUNC3] (>>) .

3 Press \( \uparrow \downarrow \) to select the “MAINTENANCE”, and press the [ENTER] key.

4 Press \( \uparrow \downarrow \) to select the “SAMPLE CUT”, and press the [ENTER] key.

5 Press \( \uparrow \downarrow \) to select the SAMPLE DATA to be cut.

• There are two types of samples, “Cut” and “Logo.” If you select “Cut,” proceed to Step 7.

6 Press the [ENTER] key.

7 Select scale factor using \( \uparrow \downarrow \) to cut Logo.

• Scale factor : 1 to 999%

8 Press the [ENTER] key for starting cutting.

Result of SAMPLE CUT

Sample data can be cut successfully, but other data cannot.

→ The host computer is faulty.

Sample data as well as other data cannot be successfully cut either. (When leaving the start/end lines without cutting off)

→ Increase the set value of [ADJ-PRS OFS] to raise the pressure for pressing the cutter blade down.

Cutting a Medium into Multiple Pieces with a Certain Length

You can cut a medium into multiple pieces with a specified length. (Automatic media-cutting function)

Function name | Outline
---|---
Cutting interval | Setting the interval for cutting the media.
Leading end adjustment cutting | Setting the length for cutting the medias’ leading edges before auto media cut starts. With edge match cutting, the specified number of media sheets can be cut at equally spaced intervals, even if their leading edges were previously cut to be slanted or uneven.
Number of times a medium is cut | Setting the number of times (sheets) for media cutting.

1 Press the [FUNC2] (MENU) [FUNC3] (>>) [ENTER] key in LOCAL.

• Cutting MENU will be displayed.

2 Press [FUNC3] (>>) .

3 Press \( \uparrow \downarrow \) to select the “MAINTENANCE”, and press the [ENTER] key.

4 Press \( \uparrow \downarrow \) to select the “MEDIA CUT”, and press the [ENTER] key.

5 Press \( \uparrow \downarrow \) to select a cutting interval, and press the [ENTER] key.

• Set value : 10 to 10,000 mm

6 Press \( \uparrow \downarrow \) to select a length for the leading end adjustment cutting, and press the [ENTER] key.

• Set value : 0 to 500 mm

7 Press \( \uparrow \downarrow \) to select the number of times a medium is cut (number of pieces produced by cutting a medium), and press the [ENTER] key.

• Set value : 1 to 9,999

• The number of cuts that you set here will be executed.

• You can halt the cutting by pressing the [END/POWER] key.

8 Press the [END/POWER] key several times to end the setting.
Cutting out Data without Register Marks (PC ORIGIN OFFSET)

Adjust the misalignment between printing and cutting by Print & Cut. Print the adjustment pattern from RasterLink6, and enter the adjustment values to the printer.

For Print & Cut without registration marks

1. Set the machine to "REMOTE" status.
2. Set the print conditions (profile, cut conditions) of the job that you want to print using RasterLink6.
   - Click [OK] to print the adjustment pattern.
4. When the pattern is printed, press (ADJUST) and select "PC ORIGIN OFFSET".
   - When the media is fed, peel the cut part of the pattern, and check the adjustment values.
   - Enter the value of the position that has the least misalignment between top and bottom. The example here shows that -4 has the least misalignment, so enter "-4".
   - Enter the value of the position that has the least misalignment between right and left. The example here shows that 2 has the least misalignment, so enter "2".
5. Enter the adjustment values.
   - When you press the [ENTER] key, the media return, and the operation is completed.
   - When printing the data that has a different resolution (Y), make adjustment again. (Save an adjustment value per resolution)
   - You cannot print adjustment patterns with multiple conditions continuously, and enter the adjustment values. Make sure you print and set one adjustment value per condition.
For Print & Cut with registration marks

1. Set the machine to "REMOTE" status.

2. Set the print conditions (profile, cut conditions) of the job that you want to print using RasterLink6.

4. Select "Add registration mark".
   - Click [OK] to print the adjustment pattern.

5. When the pattern is printed, press \( \text{FUNCTION (ADJUST)} \) and select "TP OFFSET".
   - When the media is fed, peel the cut part of the pattern, and check the adjustment values (The actual pattern has registration marks.)

6. Enter the adjustment values
   - When you press the [ENTER] key, the media return, and the operation is completed.

Setting the Scale Adjust

When printing and cutting without registration marks, adjustment is performed if the misalignment in the scanning direction occurs between the left and right edges of the media.

When you perform scale adjustment, adjustment is performed automatically.

1. Set a media (P.2-4)
   - Set the sheet to print the registration mark.

2. Press the SEL key, and press the (ADJUST) in LOCAL.
   - ADJUST MENU will be displayed.

3. Press \( \uparrow \downarrow \) to select the “SCALE ADJUST”, and press the ENTER key.

4. Press \( \uparrow \downarrow \) to select the resolution, and press the ENTER key.

5. Press the END/POWER key several times to end the setting.
This chapter describes the items required to use this machine more comfortably, which are the methods for the daily care, the maintenance of the ink cartridges etc.
**Maintenance**

Maintain the machine regularly or as necessary so that its accuracy will be maintained and it can continue to be used for a long time.

**Precautions for Maintenance**

Pay attention to the following items when maintaining this machine.

- Turn off the main power and unplug the power cable before maintenance.
- Pay close attention to ventilation and be sure to wear the included safety glasses and gloves provided, and the filtering face mask, when handling ink, maintenance cleaning solution, waste ink, or other solutions used in this machine. Failure to do so may result in ink or other liquids splashing and coming into contact with the skin, eyes, or mouth.
- Never disassemble the machine. Disassembling it can result in electric shock hazards or damage to the machine. Before maintenance, be sure to turn off the power switch and unplug the power cable; otherwise, an unexpected accident may occur.
- Prevent moisture from entering the machine. Moisture inside the machine can cause electric shock hazards or damage to the machine.
- To ensure stable ink jetting, it is necessary for the machine to eject a small amount of ink (flushing) regularly when a printing (outputting) operation has not been performed for a long time.
- When the machine is not to be used for a long time, turn off only the power switch on the front side, leave the main power switch at the right side turned ON (in the position of | ), and leave the power cable connected.
- Do not wipe the nozzle face of the heads, wiper, caps, etc. with water or alcohol. Doing so can cause nozzle clogging or machine failure.
- Do not use benzine, thinner, or any chemical agent containing an abrasive. Such materials can deteriorate or deform the surface of the cover.
- Do not apply a lubricant, etc. to any parts inside the machine. Doing so can cause printing failure.
- Be careful that the cleaning solution, ink, etc. not to stick to the cover because this may cause the surface of the cover to deteriorate or deform.

**About Cleaning Solution**

Use the cleaning liquid dedicated for the ink being used.

<table>
<thead>
<tr>
<th>Type of Ink</th>
<th>Applicable maintenance washings</th>

<td>Sublimation dye ink</td>
<td>Cleaning-Solution Bottle kit A29 (SPC-0137) [Sold separately]</td>
</tr>
</tbody>
</table>

**Cleaning the Exterior Surfaces**

When the exterior surfaces of the machine are stained, dampen a soft cloth with water or a neutral detergent diluted with water, squeeze it, and wipe the surfaces with the cloth.

**Cleaning the Platen**

- Turn off the main power and unplug the power cable before maintenance.

Continuing to use the media while it is dirty may cause media to be fed incorrectly, or rubbing dirt or solid ink onto the head nozzle surface, resulting in discharge failure (nozzle clogging, deflection, etc.).

- Do not allow liquids to enter the machine. There is a risk of equipment failure, electric shock, or fire.
- If the dirt is noticeable, use a soft cloth soaked in a neutral detergent diluted with water, wrung out, and then wiped off.
- Before cleaning the platen, make sure that the platen has cooled adequately.
- The groove that slides the media press and the groove that cuts the media are particularly easy to collect dust. Please carefully remove the dust.
Cleaning the Media Sensor

The media sensors are located on the platen in the backside and the bottom surface of the head. When the sensor is covered with dust, etc., it may cause false detection of media. Using a cotton swab, remove the dust, etc. accumulated on the surface of the sensor.

When cleaning the sensor on the lower surface of the head is cleaned, move the carriage to the left end by the operations of step 1 of P.5-12 “Cleaning the Ink Head and the Area around It”, and clean it.

Cleaning the Media Press

When the media press is covered with lint, dust, etc., a media cannot be fed normally during printing or dust sticks to the nozzles, which may result in abnormal printing. Clean the media press regularly.

Replacing the exhaust BOX filter or exhaust BOX.

Replace the exhaust BOX filter (product number: SPA-0249) or the exhaust BOX (product number: SPA-0248) when it is dirty with ink.

1. Remove the tabs (2 locations) on the exhaust BOX.
   - There are tabs engaged at the rear of the exhaust box also.

2. Remove the exhaust BOX and exhaust BOX filter.

Caution

Don’t touch the cutter around the media sensor. Sharp cutter tip may injure you.
Chapter 5 Maintenance

3 Replace the exhaust BOX filter or the exhaust BOX with a new one.

4 Attach the exhaust BOX filter to the exhaust BOX.
   • Insert the exhaust BOX filter in the exhaust BOX tabs.

5 Attach the exhaust BOX to its original location.
   • Engage the exhaust box rear tabs into the machine body, then push in the front part of the box.

Replace the CP pad set.

Replace CP pad set (SPA-0257) when it is dirty.

1 Push up the tabs (2places) of CP pad Assy.

2 Remove the CP pad Assy.

3 Attach a new CP pad Assy.
   • After inserting the tabs of CP pad Assy to the slit of C slider, fit the whole.
Replacing the pen line rubber or pen line sponge.

There are two types of pen line, one is rubber type and the other is sponge type.
Use the pen line rubber when writing with a pen or cutting a sheet.
Use the pen line sponge when cutting on the dotted line (half cut).

If the pen line rubber (PN: SPC-0770 or SPC-0771) or pen line sponge gets worn, replace it (PN: SPC-0775 or SPC-0776).

1. Remove a pen line rubber or pen line sponge with tweezers.
   - If double-sided tape glue remains in the groove of this machine, wipe off the glue with alcohol.

2. Attach the attached double-sided tape to the groove of this machine.

3. Put a new pen line rubber or pen line sponge on double-sided tape.
   - Put a new pen line rubber or new pen line sponge flattened on the two-sided tape.

Cleaning and replacing the pinch roller.

Clean the pinch roller (product number: SPA-0166 or SPA-0167) when it is dirty.
Also, when the pinch roller wears out or the dirt of the pinch roller does not fall, replace the pinch roller.

1. Raise the clamp lever.

2. Raise the clamp lever.
   - Be careful not to drop the parts in the gap of the machine as they are small.

3. Pull out the Pinch Roller shaft with care not to drop the pinch roller.

4. Remove the pinch roller.

5. Clean or replace the O-ring and pinch roller.
   - Wipe off the ink sticking to the O-ring and pinch roller with a clean stick dipped in cleaning solution for maintenance. Wipe off so that cleaning solution for maintenance will not remain.
   - If it does not become clean even after cleaning, replace the pinch roller with the following procedure.
     (1) Install a new pinch roller.
     (2) Insert the PR axis and fit O ring.
Chapter 5 Maintenance

About MAINTENANCE MENU

This provides various settings for doing maintenance on the machine. The following items can be set in Maintenance settings.

- Press this to select MAINTENANCE MENU, or to switch to the previous screen.
- Press this to use the maintenance function.
- Press this to switch to the next screen.
- Use these to select a setting item.
- Press this to confirm a setting, etc..

◆ MAINTENANCE MENUs at-a-glance

Maintaining the Capping Station

Maintain the ink cap, wiper, etc. located in the capping station. (SATION MAINT.)

- To keep the nozzle status normal, perform wiper cleaning frequently.

The ink cap and wiper function as follows.
- **Wiper**: It wipes off ink sticking to the head nozzles.
- **Ink cap**: It prevents the head nozzles from clogging due to dryness.

As the machine is used repeatedly, the wiper and ink cap gradually become dirty with ink, dust, etc. If nozzle missing cannot be corrected even after head cleaning (P.2-19) has been performed, use a cleaning solution kit and clean stick.

### Cleaning the Wiper and Cap

It is recommended that the wiper and cap be cleaned frequently in order to maintain the high image quality of the machine and keep the machine itself in good working order.

- Replace the wiper with a new one when it is extremely dirty or bent (P.5-18).
- When cleaning the wiper, be careful that lint from the clean stick does not get left on the wiper. Remaining lint may cause image quality to deteriorate.

<table>
<thead>

</tr>
</tbody>
</table>

- Be sure to wear the supplied safety glasses and gloves when maintaining the capping station. Otherwise, you may get ink in your eyes.
- Do not move the carriage out of the capping station by hand. When it is desirable to move the carriage, press the [FUNK1] key to execute the carriage-out. (P.5-8 Steps 1 to 2)

#### Cleaning the Wiper and Cap

**1. Press the** **FUNCTION (MENU)** • **ENTER** **key in LOCAL.**

- MAINTENANCE MENU will be displayed.

**2. Press the** **ENTER** **key twice.**

- The carriage moves onto the platen.

**3. Remove the wiper.**

- Pull out the wiper by holding the projections at its both ends.

**4. Clean the wiper and bracket.**

- Wipe off the ink sticking to the wiper and bracket with a clean stick dipped in cleaning solution for maintenance. Wipe off so that cleaning solution for maintenance will not remain.

**5. Clean the wiper slider.**

- Wipe off the ink sticking to the wiper slider with a clean stick dipped in cleaning solution for maintenance. Wipe off so that cleaning solution for maintenance will not remain.

**6. Set the wiper at the original position.**

- Insert the wiper by holding the projections at its both ends.
Clean the cap rubber.
- Wipe off the ink sticking to the cap rubber with a clean stick dipped in maintenance solution for maintenance. Wipe off so that maintenance solution for maintenance will not remain.

Press the [ ] key after the cleaning.

Close the front cover then press the [ ] key.
- After its initial operation, the machine returns to step1.

Washing the Head Nozzle

1. Press the [ ] key in LOCAL.
   - MAINTENANCE MENU will be displayed.
2. Press [ ] to select the “STATION”, and press the [ ] key.
3. Press [ ] to select “NOZZLE WASH”, and press the [ ] key.
   - The carriage will move onto the platen.
4. Clean the wiper and the bracket, and press the [ ] key.
   - Open the right maintenance cover then pull out it by holding projections at both ends of the wiper.
   - Clean the wiper and bracket with a clean stick dipped in maintenance washing liquid for maintenance. (SPC-0369: for solvent ink / SPC-0137: for sublimation dye ink)
   - Wipe off so that maintenance washing liquid for maintenance will not remain.

5. Clean the cap rubber, and press the [ ] key.
   - Wipe off the ink sticking to the cap rubber with a clean stick dipped in maintenance washing liquid for maintenance.
   - Wipe off so that maintenance washing liquid for maintenance will not remain.
   - At this time, the discharge passage is cleaned automatically.
6. Fill up the cap with cleaning solution for maintenance.
7. Close the front cover, and press the [ ] key.
8. Press [ ] to set the time for the maintenance washing liquid to be left as it is, and press the [ ] key.
   - Set value: 1 to 99 minutes (Unit: minute)
   - The maintenance washing liquid filled in the cap is absorbed.
   - “Please Wait” will be displayed in the display until the time you set has elapsed.
   - When nozzle missing is not cleared even after this washing is carried out several times, contact the distributor in your region or our service office.
**Washing the Ink Discharge Passage**

Wash the ink discharge passage regularly (about once a week) to prevent the head nozzles from clogging due to ink coagulation inside the passage.

- Before washing the ink discharge passage, make sure that the maintenance washing liquid is set. If the maintenance washing liquid is not set, washing operation will not be conducted and the passage could be clogged.

1. Press the [FUNC1] (MENU) ➔ ENTER key in LOCAL.
   - MAINTENANCE MENU will be displayed.

2. Press ▲ ▼ to select the “STATION”, and press the ENTER key.

3. Press ▲ ▼ to select “DISWAY WASH”, and press the ENTER key.
   - The carriage will move onto the platen.
   - Dry suction operation is performed repeatedly until the washing work is completed.

4. Press the ENTER key.
   - Dry suction operation is performed repeatedly until the washing work is completed.

5. Fill up the cap with cleaning solution for maintenance.

   - If the cleaning solution cartridge is not usable, suck maintenance solution into a dropper and fill up the cap with it. Fill up the cap with maintenance solution on the verge of overflow from the cap.

6. Press the ENTER key.

When the Machine Is Not Used for a Long Time

When the machine is not going to be used for a week or more, use the cleaning function for custody to clean the head nozzles and ink discharge passage. After this, keep the machine in custody.

- Use the machine with always turning “ON” the main power. The function preventing nozzle clogging operates automatically to protect the head of the nozzle.
- The head nozzle may result in nozzle clogging if the main power switch is left OFF for a long time.

<table>
<thead>
<tr>
<th>Check the items on the right beforehand.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is [NEAR END] or [INK END] displayed?</td>
</tr>
<tr>
<td>The cleaning solution or ink is absorbed when the nozzles are washed. At this time, if the state of &quot;no ink&quot; or &quot;almost no ink&quot; is detected, the nozzle washing operation cannot start.</td>
</tr>
<tr>
<td>Replace the cartridge with another from which the state of &quot;almost no ink&quot; or &quot;no ink&quot; is not detected.</td>
</tr>
</tbody>
</table>

1. Press the [FUNC1] (MENU) ➔ ENTER key in LOCAL.
   - MAINTENANCE MENU will be displayed.

2. Press ▲ ▼ to select the “STATION”, and press the ENTER key.

3. Press ▲ ▼ to select “CUSTODY WASH”, and press the ENTER key.
   - The carriage will move onto the platen.
   - If the cleaning solution cartridge is not usable, suck maintenance solution into a dropper and fill up the cap with it. Fill up the cap with maintenance solution on the verge of overflow from the cap.

4. Press the ENTER key.
   - Until wiper/bracket cleaning is competed, “COMPLETED” is displayed on the screen. After the work up to the step 3 is completed, press the [ENTER] key. If you press the [ENTER] key before cleaning is completed, the machine moves to the next washing procedure.

5-10
Clean the wiper and the bracket.
(1) Open the front cover then pull out it by holding projections at both ends of the wiper.
(2) Clean the wiper and bracket with a clean stick dipped in cleaning solution for maintenance. (SPC-0369: for solvent ink / SPC-0137: for sublimation dye ink)
Wipe off so that cleaning solution for maintenance will not remain.
(3) Insert it in the original position by holding the projections at both ends of the wiper.

Press the [ENTER] key.
- Until wiper cleaning is competed, [COMPLETED (NEXT): ENT] is displayed on the screen. After the work up to the step 5 is completed, press the [ENTER] key. If you press the [ENTER] key before cleaning is completed, the machine moves to the next washing procedure.

Clean the cap rubber.
- Wipe off the ink sticking to the cap rubber with a clean stick dipped in maintenance solution for maintenance.
- Wipe off so that maintenance solution for maintenance will not remain.
- At this time, the discharge passage is cleaned automatically.

Fill up the cap with cleaning solution for maintenance.
- If the cleaning solution cartridge is not usable, suck maintenance solution into a dropper and fill up the cap with it. Fill up the cap with maintenance solution on the verge of overflow from the cap.

Press the [ENTER] key.
- The nozzles are washed.
- When the nozzles have been completely washed, the head moves to the maintenance position.

Open the front cover.
Fill up the cap with cleaning solution for maintenance.

If the cleaning solution cartridge is not usable, suck maintenance solution into a dropper and fill up the cap with it. Fill up the cap with maintenance solution on the verge of overflow from the cap.

Close the front cover and press the key.

After its initial operation, the machine returns to step 2.

Cleaning the Ink Head and the Area around It

Because the ink head employs a very precise mechanism, due care needs to be taken when it is cleaned. Using a clean stick, etc., rub off gelatinous ink or dust that may stick to the lower part of the slider and the area around the ink head. In doing so, never rub the nozzles of the head.

Tools required for cleaning

<table>
<thead>
<tr>
<th>Clean stick (SPC-0527)</th>
<th>Gloves</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Safety glasses</strong></td>
<td></td>
</tr>
</tbody>
</table>

- Be sure to wear the attached safety glasses and gloves when cleaning the area around the ink head. Otherwise, you may get ink in your eyes.
- The ink contains organic solvent. If you get the ink on your skin or in your eyes, wash it away with plenty of water immediately.

Press the (MENU) key in LOCAL.

MAINTENANCE MENU will be displayed.

Press the key twice to select the “CARRIAGE OUT”.

Press to select “HEAD MAINTENANCE”, and press the key.

The carriage will move to the left end of this machine.

Open the maintenance cover.
Use a clean stick soaked in maintenance cleaning fluid to wipe ink off the head surface or other surfaces.

- Never rub the nozzles.

Press the \( \text{FUNC1} \) (MENU) \( \uparrow \downarrow \) \( \text{ENTER} \) key in LOCAL.

- MAINTENANCE MENU will be displayed.

Press \( \uparrow \downarrow \) to select “NOZZLE RECOVERY”, and press the \( \text{ENTER} \) key.

Press the \( \text{ENTER} \) key twice.

- Printing of the nozzle pattern will start.
- Select “ENTRY” then “Move to select of the Nozzle line (Step 4) without drawing a pattern”

Select the Nozzle line that needs NOZZLE RECOVERY by pressing \( \uparrow \downarrow \), and press \( \text{ENTER} \) key.

Important:
- For 6-color ink sets, the nozzle patterns “H1-B” and “H1-D” are not printed.
- When using leaf media, set a media of more than A3 size put horizontally. If a media with narrow width is set, printing will only be conducted to midway.

Overhead view

Nozzle pattern

- For 6-color ink sets, the nozzle patterns “H1-B” and “H1-D” are not printed.
- When using leaf media, set a media of more than A3 size put horizontally. If a media with narrow width is set, printing will only be conducted to midway.

Select the Nozzle line that needs NOZZLE RECOVERY by pressing \( \uparrow \downarrow \), and press \( \text{ENTER} \) key.

</tbody>
</table>

6 Press the END/POWER key several times to end the setting.

- Up to 10 nozzles can be registered per 1 nozzle line.
- Even if you use this function, time required for drawing does not change.
- When printing has been done with the lowest path, nozzle recovery is not reflected. Moreover, depending on the conditions, there are cases where only 20 to 120 nozzles are enabled at both head ends (front and rear). Perform test printing to confirm.
- When you use white ink, print on the clear film to check.
Automatic Maintenance Function

To use this machine comfortably, you can set various maintenances to be performed automatically.
Here, set performing intervals of various automatic maintenances.
You can prevent troubles such as ink clogging by performing automatic maintenance periodically (automatic maintenance function).

For the auto maintenance functions, the following items can be set:

- When you perform maintenance manually, after manual maintenance is completed and when time set with the automatic maintenance function has passed, maintenance starts automatically.

### Setting the Refreshing Intervals

The interval between each operation of ejecting a small amount of ink from the nozzles to prevent nozzle clogging is set.

1. Press the **(FUNC) (MENU) ** key in LOCAL.
   - MAINTENANCE MENU will be displayed.
2. Press **** to select “AUTO MAINTENANCE”, and press the ** key.
3. Press ** to select the “REFRESH”, and press the ** key.
4. Press ** to set the refreshing interval, and press the ** key.
   - **Set value**: The set value will differ according to the ink type being used.
5. Press the **ENDPOWER** key several times to end the setting.

### Setting the Pump Tube & Nozzle Wash Intervals

To prevent ink clogging due to coagulation of ink on the ink discharge path and the head nozzle surface, set the interval for cleaning the ink discharge path and the head nozzle surface. When cleaning the head nozzle, also set the leaving time (Time to immerse the nozzle surface in the cleaning solution filled in the cap).

1. Press the **(MENU) ** key in local mode.
   - MAINTENANCE MENU will be displayed.
2. Press ** to select “AUTO MAINTENANCE”, and press the ** key.
3. Press ** to select “PUMP TUBE & NOZZLE WASH”, and press the ** key.
4. Press ** to select “INTERVAL”, and press the ** key.
5. Press ** to set the pump tube and nozzle washing interval, and press the ** key.
   - **Set value**: 24 to 48 hours (h) The default setting differs depending on the ink type used.
6. Press ** to select “LEAVING TIME”, and press the ** key.
7. Press ** to set the leaving time to immerse the nozzle surface in the cleaning solution, and press the ** key.
   - **Set value**: OFF, 1 to 99 minutes (1 minute unit)
   - If the leaving time is set to OFF, nozzle cleaning will not be performed. Only pump tube cleaning is performed.
   - **By default, the leaving time is set to “OFF”. Therefore, nozzle cleaning is not performed. If you want to execute nozzle cleaning, set the leaving time. Recommended value is 1 minute.
8. Press the **ENDPOWER** key several times to end the setting.

### Function Descriptions

<table>

### Important Notes

- If the “Check waste ink” warning message is displayed, the operation set in the auto maintenance function is not carried out. Perform the operations of P.5-19 “Replace the waste ink tank with another” if required.
- When the power switch on the front of the machine is turned off, check the waste ink tank.
- When using the auto maintenance function, make sure that the cleaning solution for maintenance is set. If the cleaning solution for maintenance is not set, the pump tube and nozzle cleaning operations will not be regularly performed, and the pump tube and the head nozzle may be clogged.
- Hard cleaning is performed at the end of nozzle cleaning. (Ink consumption: approx. 33 cc / 1 time)
  Therefore, when cleaning cannot be performed (for example, ink shortage), nozzle cleaning is not performed and only pump tube cleaning is performed.
  Please be careful.
Setting the Cleaning Intervals and Type

The cleaning type and the interval between each cleaning operation are set.

1 Press the (FUNC) (MENU) ➔ ➔ ➔ key in LOCAL.
   • MAINTENANCE MENU will be displayed.

2 Press ➔ ➔ to select “AUTO MAINTENANCE”, and press the ➔ key.

3 Press the ➔ several times to select “Interval” or “Type”, and press the ➔ key.

4 Press ➔ ➔ to select a set value, and press the ➔ key.
   • Set value: The set value will differ according to the ink type being used.
   • Set value of type : SOFT/ NORMAL/ HARD

5 Press the ENDPOWER key several times to end the setting.

Fill up Ink

Supplies ink to correct nozzle clogging.

1 Press the (FUNC) (MENU) ➔ ➔ ➔ ENTER key in LOCAL.
   • MAINTENANCE MENU will be displayed.

2 Press ➔ ➔ to select “FILL UP INK”, and press the ➔ key.

3 Press ➔ ➔ to select the filling type.
   • Soft : Use this in cases where head cleaning will not achieve recovery, such as when multiple clogged nozzles occur or nozzle cluster dropout occurs.
   • Normal : Use this if nozzle cluster dropout occurs in initial ink filling.
   • Hard : Use this in cases where the dumper has become empty, such as in dumper replacement.

4 Press the ➔ key.
   • If you selected “Soft” in step 3, a Select Fill Up Color screen will be displayed.
     If you selected “Normal” or “Hard”, go to step 6.

5 Press ➔ ➔ to select the filling color, and press the ➔ key.

6 Press the ➔ key.
   • Ink is supplied automatically.

7 Press the ENDPOWER key several times to end the setting.
Ink Maintenance

Shake the ink periodically. If you do not shake the ink periodically, the print quality may deteriorate rapidly. The frequency of shaking depends on the type and color of the ink. Please use our recommended ink cartridge.

**Ink Maintenance (Except white, silver and orange ink)**

Shake the ink periodically. (P.1-10) The frequency of shaking (recommended) is as follows.
- Solvent ink (SS21/ES3): Once a month
- Sublimation dye ink (Sb53/Sb54): Once a week

**White/Silver Ink Maintenance**

White/Silver ink precipitates easier than other inks. If not printing more than two weeks, white ink may precipitate in the ink cartridge or inside of this machine. When an ink precipitates, the nozzle may be clogged and it can not draw normally.

Make sure to perform periodical maintenance to avoid precipitation and to keep white ink in good condition.

(1) Remove the ink cartridge and shake gently in the following cases. (P.1-10)
- When 24 hours have passed with the power supply is ON.
- When the power supply is ON, the warning message “SHAKE WHITE/SILVER INK CARTRIDGES” is displayed.

(2) Perform the maintenance below before working once a week.

1. Press the (MENú) key in LOCAL. • MAINTENANCE MENU will be displayed.
2. Press (<<), and press the ENTER key.
3. Press (▲▼) to select “WHITE MAINT”, and press the ENTER key.
4. Press the ENTER key.
5. Press the ENTER key. • The automatic discharging operation and the filling operation are performed, then, cleaning is performed.
6. Press the ENDPOWER key several times to end the setting.

**Orange Ink Maintenance**

Orange ink precipitates easier than other inks. If you print by precipitated white ink, the print quality will deteriorate rapidly. Perform the following maintenance to prevent the degradation of print quality.

(1) Remove the ink cartridge and shake gently in the following cases. (P.1-10)
- Around once a week
- 24 hours after the last printing

If the printer is not used for over a week, please remove the ink cartridge and shake gently. Reinsert ink cartridge into the machine and operate [INK FILLING (Hard cleaning)] once.

If print result goes not well, please execute [INK FILLING] again. (P.5-16)
Replacements consumables

Replacing the wiper

The wiper is consumable. When the display indicates the warning message “Replace a WIPER” it is necessary to check and replace the wiper, immediately replace the wiper with a new one. Also, wipe ink sticking to the lower surface of the slider off.

- When the warning message for replacing wiper is shown, confirm whether there is no damage and fuzz at the top edge of the wiper film. If there is no damage on the top edge of the wiper film, it is possible to use the wiper continuously without replacing it.
- A cleaning wiper is an option. Buy one through the dealer in your region or at our service office.

1. Press the \( \text{FUNC} \text{(MENU)} \text{SELECT} \text{ENTER} \) key in LOCAL.
   - MAINTENANCE MENU will be displayed.
2. Press \( \text{SELECT} \) to select the “STATION”, and press the \( \text{ENTER} \) key.
3. Press \( \text{SELECT} \) to select “WIPER EXCHANGE”, and press the \( \text{ENTER} \) key.
   - The number of times the wiper was used will be reset.
4. Press the \( \text{ENTER} \) key.
   - The carriage will move onto the platen.
   - The number of times the wiper was used will be reset.
5. Remove the wiper.
   - Pull out the wiper by holding the projections at its both ends.

6. Insert a new wiper.
   - Insert the wiper by holding the projections at its both ends.

7. Press the \( \text{ENTER} \) key.
   - After its initial operation, the machine returns to LOCAL.

If a Waste Ink Tank Confirmation Message Appears

Ink used in head cleaning, etc. is stored in the waste ink tank on the lower right side of the machine. This machine counts the accumulated amount of discharged ink. When that reaches a specified amount, the machine displays a confirmation message. (When this message is displayed, consider the replacement of the waste ink tank.)

- The message is displayed when it reaches 80% (1.6L) of the 2L tank.

Confirmation Message in LOCAL

1. The warning message “Check waste ink” is displayed.
2. Check the state of the waste ink tank
   - When it is different from the actual amount, press \( \text{SELECT} \text{UP} \text{DOWN} \) and correct.
   - When you correct (80%), press the [ENTER] key to return to LOCAL.
   - When you replace (disposal) and clear the count, perform the procedures in “Replace the waste ink tank with another”. (P.5-19)
   - Check the waste ink level in the waste ink tank frequently. Continuing to use the product without disposing of the waste ink may result in waste ink overflowing from the waste ink tank.
Replace the waste ink tank with another

1. The warning message “Check waste ink” is displayed.
2. Press the **(FUNC.** (MENU) → **ENTER** key in LOCAL.
   • MAINTENANCE MENU will be displayed.
3. Press **△△** to select “INK TANK EXCHANGE”, and press the **ENTER** key.
4. If the amount of waste ink needs to be adjusted, press the **ENTER** key.
   • Compare the amount of waste ink shown on the display and the amount you visually confirmed. If there is no major problem with the value shown on the display, instead of the [ENTER] key, press the [END] key and proceed to Step 6.
5. Press **△△** to adjust the level, and press the **ENTER** key.
6. Pull the waste ink tank stopper to open to the front.
7. Pull it frontward to remove by holding the waste ink tank handle.
8. Replace the waste ink tank.
   (1) Prepare a new waste ink tank (SPC-0117).
   (2) Insert the waste ink tank by holding a handle of the tank.
9. Close the waste ink tank stopper.
10. Press the **ENTER** key.
    • The ink discharging amount that is controlled by the machine is reset and the message is cancelled.

- Waste ink is equivalent to waste oil of industrial waste. Request an industrial waste disposal company for disposal of waste ink.
Replacing the waste ink tank before the waste ink tank confirmation message is displayed (before the 2L tank is 80% (1.6L) full), set the waste ink information to 0% in the Information menu.

1. Perform steps 6 through 9 in “Replace the waste ink tank with another” (P.5-19) to empty the waste ink tank.
2. Press the (MENU) key in LOCAL.
   • MAINTENANCE MENU will be displayed.
3. Press to select “INK TANK EXCHANGE”, and press the key.
   • Waste ink tank information is displayed.
4. Press to adjust the level, and press the key.
   • The reset screen for the waste ink tank amount will be displayed.
5. Press the key.
   • The waste ink tank amount that is managed in this machine will be reset.

Replacing the Cutter Blade

The media cutter blade is consumable. When the cutter blade gets dull, replace it with a new one (SPA-0107).

1. Press the (MENU) key in LOCAL.
   • MAINTENANCE MENU will be displayed.
2. Press the key twice.
   • The carriage moves onto the platen.
3. Replace the cutter unit by the carriage.
   • Now the cutter unit can be moved manually. Move the cutter unit to the position where you can assure easy access, and replace the blade edge.
   1. Loosen the screw of the cutter unit.
   2. Remove the cutter unit.
   4. Fasten the screw of the cutter unit to secure the cutter unit.
4. When replacement is finished, press the key.
   • The screen returns to LOCAL.
   • The blade is sharp. Be careful not to hurt yourself or anyone else.
   • Store the cutter blade in a place that is out of the reach of children. In addition, dispose of used cutter blades according to regional laws and regulations.
   • When replacing the cutter blade, it is recommended to place a sheet of paper under the cutter blade if it drops.
   • If you replace the waste ink tank before the waste ink tank confirmation message is displayed (before the 2L tank is 80% (1.6L) full), set the waste ink information to 0% in the Information menu.
## Replacing and Adjusting the Cutter Blade

**Replacing the cutter**

If the cutter is chipped or blunt, replace it with a new one. (Accessory parts number: SPA-0030)
New cutter (low-pressure blade set for PVC sheets: Model SPB-0030) are available from your distributor or MIMAKI's sales office.

### Adjusting the Cutter Blade

After adjusting the blade edge, set the cut condition and perform test cut to check whether cutting is performed well.

1. **Turn the adjusting knob to adjust the protruding amount of the cutter.**
   - Arrow to protrude the cutter blade. (0.5 mm per revolution)

### Replacing the cutter other than supplied one

1. **Loosen the lock nut, and pull the adjusting knob out of the holder.**
2. **Insert the cutter into the adjusting knob using tweezers.**
3. **Tighten the lock nut.**

### Name of product, Product No., Specifications, Remarks

**Caution**
- The cutter blade is sharp. Keep your fingers away from the cutter.
- Do not shake or swing the cutter holder; otherwise, the cutter blade may come off, which is dangerous.
- Keep the cutter out of reach of children. Dispose of the used cutter blade in compliance with the applicable regulations.

**Keep the cutter out of reach of children. Dispose of the used cutter blade in compliance with the applicable regulations.**
Adjusting blade edge of cutter other than supplied one

1 Loosen the lock nut.

2 Turn the adjusting knob to adjust the protruding amount of the cutter blade.

3 Tighten the lock nut so that the adjusting knob will not turn.

• The blade adjuster (Product No.: OPT-S1005) will facilitate the adjustment of the protruding amount of the blade.
This chapter describes the corrective measures to be taken for a phenomenon suspected to be troublesome and the procedures to clear the error number displayed on the LCD.
# Troubleshooting

Take appropriate actions as described below before taking the trouble as a failure. If still the problem is not solved after troubleshooting, contact your local distributor, our sales office, or service center.

## Power does not turn on

In most cases, this is due to improper connection of the power cable for the machine or computer. Check that the power cable is connected properly.

<table>
<thead>
<tr>
<th>Question</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Has the power cable been connected between the machine and a power plug socket?</td>
<td>No → Securely connect the power cable.</td>
</tr>
<tr>
<td>Is the main switch ON?</td>
<td>No → Turn on the main switch. (P.2-3)</td>
</tr>
<tr>
<td>Is the power switch located on the front of machine &quot;ON&quot;?</td>
<td>No → Turn on the power switch on the front of the machine.</td>
</tr>
</tbody>
</table>

## The machine does not start printing

This occurs when the data is not being transmitted to the machine properly. It can also occur when the printing function does not work properly or the media is not set correctly.

<table>
<thead>
<tr>
<th>Question</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is the correct interface cable used?</td>
<td>No → Use the cable exclusive for the device.</td>
</tr>
<tr>
<td>Is the interface cable properly connected?</td>
<td>No → Securely connect the interface cable.</td>
</tr>
<tr>
<td>Is the message on the display indicating that ink has run out?</td>
<td>No → Replace the ink cartridge with a new one.</td>
</tr>
<tr>
<td>Is the media not curled or bent ends?</td>
<td>No → Avoid using any media with curls or bent ends.</td>
</tr>
<tr>
<td>Is the media hanging down along the platen?</td>
<td>No → Use a take-up device or Re-load the media on the machine. (P.2-12 , P.2-4)</td>
</tr>
</tbody>
</table>

## Media get jammed / media is soiled

Media jamming or stained media is considered to be due to the use of an unsuitable media or improper setting of media.

<table>
<thead>
<tr>
<th>Question</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is a recommended media used?</td>
<td>No → Use recommended media.</td>
</tr>
<tr>
<td>Is the media not curled or bent ends?</td>
<td>No → Avoid using any media with curls or bent ends.</td>
</tr>
<tr>
<td>Is the media hanging down along the platen?</td>
<td>No → Use a take-up device or Re-load the media on the machine. (P.2-12 , P.2-4)</td>
</tr>
</tbody>
</table>
Chapter 6 Troubleshooting

The heater’s temperature will not rise to the set level
Check the basic operation.

<table>
<thead>
<tr>
<th>Phenomenon</th>
<th>Measures</th>
</tr>
</thead>
<tbody>
<tr>
<td>The heater’s temperature will not rise to the set level</td>
<td><strong>No</strong> Yes: <strong>Turn on the power to the machine.</strong> (P.2-3) No: <strong>Set the heater temperature.</strong> (P.3-6)</td>
</tr>
</tbody>
</table>

Image quality is poor
This section describes the corrective actions to be taken in case the image quality is not satisfactory. Take remedy for particular problems with image quality. If the remedy does not work, contact your local distributor, our sales office, or service center.

<table>
<thead>
<tr>
<th>Phenomenon</th>
<th>Measures</th>
</tr>
</thead>
</table>
| White lines / blur / dark stripes (in the direction of travel of the heads) | (1) Execute the head cleaning. (P.2-19)  
(2) Perform maintenance of the inside of the station. (P.5-8)  
(3) Execute the [FEED COMP.] function. (P.3-5)  
(4) If any pieces of paper or dust is attached on the path of the heads such as media press, remove it. |
| Characters are double- or triple-printed in the media feed direction | (1) Execute the [FEED COMP.] function. (P.3-5) |
| Disagreement in print positions between outward trip and homeward trip | (1) Execute the [DROP POSITION] function. (P.3-6) |
| Ink drops falling on media during printing       | (1) Execute the wiper cleaning. (P.5-8)  
(2) Execute the ink cap cleaning. (P.5-8)  
(3) Clean around the head. (P.5-12)  
(4) Execute the head cleaning [NORMAL]. (P.2-19)  
(5) Set the INTERVAL WIPING operation. (P.3-9) |

Nozzle is clogged
When nozzle clogging is not dissolved even after the head cleaning referring to P.2-19, make sure the following operations.
- Wash the head nozzle by the operations of P.5-9.
- Wash the head nozzle surface by the operations of P.5-12.
- Recovery the nozzle by the operations of P.5-13.
**Ink cartridge warning appears**

If an ink cartridge trouble is detected, the cartridge LED "red" is lit, and a warning message appears. None of printing, cleaning and all the other operations that use ink is available. In this case, replace the ink cartridge in question immediately.

**Displaying the description of ink cartridge trouble**

The contents of cartridge error are confirmable by the following operations.

> **Important**
> Once cartridge trouble is displayed, do not leave the ink cartridge without replacing it for a long time; otherwise, the machine will lose the nozzle clogging prevention function. If nozzles are clogged, the machine must be repaired by MiMAKI’s service engineer.

1. Press the **ENTER** key in **LOCAL**.
2. Press the **ENTER** key.

**When the ink leakage occurs**

If the ink leakage occurs, unplug the power plug to turn off the main power switch, and contact your local distributor, our sales office, or service center.
**Warning / Error Messages**

If some trouble occurs, the buzzer sounds and the display shows a corresponding error message. Take an appropriate remedy for the displayed error.

Could not detect the registration marks

Check whether the registration marks are placed appropriately. (P.4-2)
Make sure that the media is not curled.
Make sure that the position to start detecting the registration marks is correct.
Make sure that black registration marks are printed on a white base.
Make sure that there are no printed images or smudges between registration marks and that there is no dust adhered.
Make sure that the registration mark detection settings are correct.
If the registration marks still cannot be detected, even after clearing the check items above, contact your local distributor, our sales office, or service center.
If the area around registration marks are colored, set the “MARK FILL UP” of the registration mark detection settings to ON.

Could not detect the pen height.

• Turn off the printer, wait for a while, and turn on the printer again. When displaying again, contact your local distributor, our sales office, or service center.

The pen height is not correct.

• Make sure that the pen line rubber is not worn out extremely, or it has not come off or changed form.
• Make sure that there is nothing adhered to the pen line rubber.
• After putting the pen in the commercially available pen holder, check that it is installed at the correct position.
• If an error is still displayed even after clearing the check items above, contact your local distributor, our sales office, or service center.

*1. The maximum speed may be limited, depending on the size of a used medium. In addition, the cutting section does not operate with both speed and acceleration being at the maximum.

*2. Use one with a diameter of 8 to 9 Φ whose clamped part has no protrusion or taper. In addition, because the position of the pen point changes, depending on the types of pens, no good image quality can be ensured.

*3. This conforms with our specified sheet.

*4. When a blade dedicated for fluorescent sheets (SPB-0007) or a blade dedicated for reflecting sheets (SPB-0006) is used.

*5. For repetition accuracy, see the lower part of this page.

| Color              | Black ink cartridge     | Black ink cartridge |
|                    | Blue ink cartridge      | Cyan ink cartridge |
|                    | Magenta ink cartridge   | Magenta ink cartridge |
|                    | Yellow ink cartridge    | Yellow ink cartridge |
|                    | Light blue ink cartridge| Light cyan ink cartridge |
|                    | Light magenta ink cartridge | Light magenta ink cartridge |
|                    | Deep black ink cartridge| Light black ink cartridge |

| Ink capacity       | 440ml per cartridge      | 220ml / 440ml per cartridge |

| Shelf life         | The period is printed on the ink cartridge. Within three months after opening the package even in the available period. |

| Storage temperature | Storage | 10 to 35°C (50 to 95°F) (Average daily temperature) Be sure to keep a vessel in the airtight condition. Be sure to keep a vessel in a dry, well-ventilated, cool and dark location. |

|                | Transportation | 0 to 40°C (32 to 104°F) Avoid the condition lower than 0 °C (32 °F) and higher than 40 °C (104 °F). |

*1. This ink can be used with CJV150-75 models with the firmware version 1.80 or later.

- Do not disassemble ink cartridges and do not refill them with ink.
- Ink could freeze if kept in a cold place for an extended period.
- When aqueous ink is used, if the ink freezes, the quality is changed and the ink becomes unusable. Store the ink in an environment that will not freeze the ink.
## Setting orders of ink cartridges

- Set the ink cartridge according to the cartridge label under the ink station.
- This ink can be used with CJV150-75 models with the firmware version 1.80 or later.
