

Network Function Compatibility Table

The network function has the following two functions.

Network Printing/Plotting - Connect the PC and the printer with Ethernet, and print via a network.

Event mail - Indicates the "Network & mail" function of the printer side.

By prior registration, you will be informed the status of the printer by e-mail.

Mimaki products that are compatible with "Event Mail" and "Network Printing/Plotting" are as shown below.

Important!

- Models that are not currently compatible might become compatible through a Firmware update.
- Refer to the Mimaki website as future compatibility varies depending on each model.
- Use the most recent version of the Network Configurator.

Tx300P-1800	Applicable	Applicable
UJF-7151 plus	Applicable	Applicable
UJV500-160	Applicable	N/A
UJV55-320	Applicable	Applicable

If a printer or plotter is compatible with both "Event Mail" and "Network Printing/Plotting" functions, "Network Printing/Plotting" can be used automatically by implementing the "Event Mail" settings with the Network Configurator. It is not necessary to separately specify the "Network Printing/Plotting" settings.
